Sustainability in Action

Hydroblasting (up to $\leq 40,000$ psi), also known as water blasting or high-pressure water jetting, is an industrial cleaning method that uses a high-pressure stream of water to clean surfaces and remove unwanted substances. Our 3D cleaning method avoids the use of harsh chemicals, while effectively preparing and cleaning surfaces of tanks and pipelines, and cleaning drainage systems. This method avoids the need for confined space entry.

We remove unwanted substances, including:

- Scale
- Petroleum
- Ash
- Guano
- Dust
- Oil
- Paint
- Graffiti
- Concrete

Capabilities:

- High-pressure hydroblasting
- Line cleaning
- Vessel / tank cleaning
- Condenser cleaning
- Tube bundle cleaning
- Hydro mowing

Benefits

- ✓ Safe and efficient cleaning method
- ✓ Reduced downtime compared to mechanical cleaning techniques
- ✓ Professionally trained teams
- ✓ Less labor-intensive and less downtime
