

Medical Waste Processing

Republic Services offers compliant medical waste disposal solutions that support your sustainability goals, with innovative waste-to-energy and landfill reduction initiatives.

REPUBLIC[®]
SERVICES

Sustainability in Action

Our innovative Microwave Disinfection System thoroughly disinfects medical waste, renders the material unrecognizable via shredding and reduces its volume by approximately 80 percent, saving landfill space.

Once treated, the regulated medical waste can be disposed of as non-regulated solid waste in landfills or as a sustainable alternative used as feed stock for waste-to-energy facilities, helping companies reach their sustainability goals.

Accepted Waste

- **Sharps and Contaminated Medical Equipment:**
including needles, syringes, IV bags, tubing, gloves and gowns
- **Laboratory and Research Waste:**
such as cultures, specimens and pathology or histology samples
- **Biohazardous Materials:**
including blood, blood products, animal and human tissues, and waste from dialysis or surgical procedures
- **Other Contaminated Materials:**
such as animal bedding and associated packaging materials

Republic Services also offers other processing options for chemotherapy waste, pharmaceuticals and other materials where microwave disinfection is not appropriate.

Value of Medical Waste Processing

- ✓ Improved safety and compliance
- ✓ Advanced sustainability solutions
- ✓ Single-source solutions
- ✓ Efficient and cost-effective
- ✓ Innovative technology and solutions
