

BUSINESS RECYCLING REQUIREMENTS

COLLECTION & CONTAINERS

Subscribe to and participate in the hauler's 3-container program (trash, recycling, organics) or Self-haul recyclables and organics to a recovery facility and report to the City.

Provide sufficient, properly sized, and accessible containers with clear labels or colors - green for organics, blue for recycling, & black/grey for trash - for all employees, contractors, customers, and tenants.

Place recycling and organics containers alongside trash containers in all indoor and outdoor customer areas where those materials are generated. Excludes restrooms and multi-family dwellings.

EDUCATION & MONITORING

- ✓ Periodically inspect trash, recycling, and organics containers for contamination and inform employees if containers are contaminated.
- ✓ Instruct employees how to properly sort material into the correct trash, recycling, and organics containers.
- ✓ Annually educate employees, contractors, tenants, and customers about about recycling requirements and proper sorting of recyclable and organic material. Property managers and landlords should provide new tenants recycling requirements information within 14 days of occupation.
