✔ Clean C&D Acceptable Items

Asphalt

Clay roof tiles

Rock

Dirt

Cardboard

Dry wall

Brick

Metal

Concrete

Non-treated lumber

✔ Mixed C&D Acceptable Items

- ✔ Brick
- ✔ Polystyrene foam
- ✔ Toilets or tubs
- ✔ Carpet
- ✔ Asphalt tiles
- ✔ PVC piping
- ✔ Glass
- ✔ Stucco with wire mesh
- ✔ Wood (treated, stained or painted)
- ✔ Insulation

To request service, please contact Republic Services at **714.238.2444**, for long-term services (over 30 days), please call **844.677.7378**.

Sustainability in Action

C&D Recycling

What is C&D?

Construction and demolition (C&D) is non-hazardous, uncontaminated material generated during construction, renovation, repair or demolition of buildings and other structures.

What happens to C&D?

CALGreen

Your project might be required to recycle 65% of C&D debris. Materials generated from construction projects must be recycled to meet required state building codes (CalGreen) and laws (Senate Bill 1383), which require 65% of all debris to be diverted from the landfill. To meet reporting obligations, the City of Anaheim requires certain covered individuals pulling permits with construction and demolition debris to provide information on where the materials will be taken and the percentage of materials diverted from the landfill. A Construction & Demolition Waste Diversion Application must be submitted before a permit may be issued. Go here to find out if you are required to submit an application:

Anaheim.net/5390/C-D-Waste-Diversion.

Republic Services C&D services

When you use Republic Services to dispose of your debris (rent a dumpster or use our transfer station), you do not need to provide additional diversion reporting as part of the City of Anaheim Construction & Demolition Waste Diversion Application. When placing an order, please inform the Construction Manager and Customer Service representatives that the services ordered are for C&D processing to receive diversion credit.

What can you do to reduce, reuse and recycle?

You can help divert C&D materials from disposal by practicing source reduction, salvaging, recycling and reusing existing materials, and by buying used and recycled materials and products. You can:

- Salvage and reuse items of high value that can be reclaimed.
- Move or relocate a building instead of using traditional demolition.
- Dismantle buildings through deconstruction.

Roll-off dumpsters cannot exceed 10 tons, per Department of Transportation regulations.

3-yard dumpster (6'L x 3'5"W x 4'H)

- ▶ Capacity: 300 pounds maximum
- ▶ Recommended for temporary cleanups
- ▶ NO diversion or tonnage report available

15-yard roll-off dumpster (15'L x 7'8"W x 4'4"H)

- ▶ Capacity: 2-3 tons maximum
- ▶ Recommended for construction projects with heavy materials, such as concrete, asphalt and dirt
- ▶ Diversion and tonnage report available upon request

30-yard roll-off dumpster (23'1"L x 8'W x 6'1"H)

- ▶ Capacity: 10 tons maximum
- ▶ Recommended for large remodels and bulk materials
- ▶ 40-yard roll-off available
- ▶ Diversion and tonnage report available upon request

Actual product may vary from the photographs shown above.
