

Republic Services, Inc.

2025 CDP Corporate Questionnaire 2025

Word version

Important: this export excludes unanswered questions

This document is an export of your organization's CDP questionnaire response. It contains all data points for questions that are answered or in progress. There may be questions or data points that you have been requested to provide, which are missing from this document because they are currently unanswered. Please note that it is your responsibility to verify that your questionnaire response is complete prior to submission. CDP will not be liable for any failure to do so.

Contents

C1. Introduction

(1.1) In which language are you submitting your response?

Select from:

☒ English

(1.2) Select the currency used for all financial information disclosed throughout your response.

Select from:

☒ USD

(1.3) Provide an overview and introduction to your organization.

(1.3.2) Organization type

Select from:

☒ Publicly traded organization

(1.3.3) Description of organization

Unless the context requires otherwise, all references in this CDP response to "Republic", "the Company", "we", "us" and "our" refer to Republic Services, Inc. and its consolidated subsidiaries. Republic is one of the largest providers of environmental services in the United States, as measured by revenue. Geographically, 99.9% of our operations by revenue are located in the United States of America and Canada, with less than 0.1% in United States Overseas Territories (Puerto Rico and United States Virgin Islands) and Mexico. As of December 31, 2024, we operated 248 transfer stations, 75 recycling centers, 208 active landfills, 2 treatment, recovery and disposal facilities, 23 treatment, storage and disposal facilities (TSDF), 5 salt water disposal wells, 14 deep injection wells, and 1 polymer center. We are engaged in 79 landfill gas-to-energy and other renewable energy projects and had post-closure responsibility for 125 closed landfills. Our Scope 1 and 2 emissions include landfill methane emissions, vehicle and equipment emissions, and building electricity emissions. We have adopted an aggressive target for reducing these operational GHG emissions, approved by the Science Based Targets initiative (SBTi). Our goal is to reduce absolute Scope 1 and 2 greenhouse gas emissions 35% by 2030 (2017 baseline year), which aligns with the United Nations "Climate Action" Sustainable Development Goal, 13.2 — reduce greenhouse gas emissions and the Paris Agreement. While our Scope 3 emissions are not included in our SBTi-approved goal, we publicly report them and actively engage with our value chain.

[Fixed row]

(1.4) State the end date of the year for which you are reporting data. For emissions data, indicate whether you will be providing emissions data for past reporting years.

(1.4.1) End date of reporting year

12/31/2024

(1.4.2) Alignment of this reporting period with your financial reporting period

Select from:

☒ Yes

(1.4.3) Indicate if you are providing emissions data for past reporting years

Select from:

☒ Yes

(1.4.4) Number of past reporting years you will be providing Scope 1 emissions data for

Select from:

☒ 5 years

(1.4.5) Number of past reporting years you will be providing Scope 2 emissions data for

Select from:

☒ 5 years

(1.4.6) Number of past reporting years you will be providing Scope 3 emissions data for

Select from:

☒ 5 years

[Fixed row]

(1.4.1) What is your organization’s annual revenue for the reporting period?

(1.5) Provide details on your reporting boundary.

	Is your reporting boundary for your CDP disclosure the same as that used in your financial statements?
	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(1.6) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?**ISIN code - bond****(1.6.1) Does your organization use this unique identifier?**

Select from:

☒ No**ISIN code - equity****(1.6.1) Does your organization use this unique identifier?**

Select from:

☒ No**CUSIP number****(1.6.1) Does your organization use this unique identifier?**

Select from:

☒ No

Ticker symbol

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ Yes

(1.6.2) Provide your unique identifier

NYSE: RSG

SEDOL code

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

LEI number

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

D-U-N-S number

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

Other unique identifier

(1.6.1) Does your organization use this unique identifier?

Select from:

☒ No

[Add row]

(1.7) Select the countries/areas in which you operate.

Select all that apply

☒ Canada

☒ United States of America

(1.24) Has your organization mapped its value chain?

(1.24.1) Value chain mapped

Select from:

☒ Yes, we have mapped or are currently in the process of mapping our value chain

(1.24.2) Value chain stages covered in mapping

Select all that apply

☒ Upstream value chain

☒ Downstream value chain

(1.24.3) Highest supplier tier mapped

Select from:

☒ Tier 2 suppliers

(1.24.4) Highest supplier tier known but not mapped

Select from:

☒ Tier 3 suppliers

(1.24.7) Description of mapping process and coverage

Our first value chain mapping exercise was conducted as part of our supplier transparency initiatives, using a trusted partner to solicit and collect information about key diversity criteria for our direct and tier-2 suppliers. We also maintain visibility and, in some cases, direct relationships with tier 2 suppliers for certain categories, where our tier 1 supplier serves as a distributor, for example, many of our fleet fuels are provided to us through an intermediary and many of our vehicle purchases are sold through authorized distributors on behalf of OEMs.

[Fixed row]

C2. Identification, assessment, and management of dependencies, impacts, risks, and opportunities

(2.1) How does your organization define short-, medium-, and long-term time horizons in relation to the identification, assessment, and management of your environmental dependencies, impacts, risks, and opportunities?

Short-term

(2.1.1) From (years)

0

(2.1.3) To (years)

5

(2.1.4) How this time horizon is linked to strategic and/or financial planning

This aligns with broader operational, financial and strategic planning timeframes.

Medium-term

(2.1.1) From (years)

5

(2.1.3) To (years)

10

(2.1.4) How this time horizon is linked to strategic and/or financial planning

This timeframe aligns with capital decisions for fleet assets, which have roughly a 10-year lifetime.

Long-term

(2.1.1) From (years)

10

(2.1.2) Is your long-term time horizon open ended?

Select from:

☒ No

(2.1.3) To (years)

100

(2.1.4) How this time horizon is linked to strategic and/or financial planning

This timeframe aligns with larger infrastructure capital decisions. For example, recycling facilities are 20-30 year assets and we plan for and monitor landfill airspace for 40+ years and as much as 100 years for some sites.

[Fixed row]

(2.2) Does your organization have a process for identifying, assessing, and managing environmental dependencies and/or impacts?

	Process in place	Dependencies and/or impacts evaluated in this process
	Select from: <input checked="" type="checkbox"/> Yes	Select from: <input checked="" type="checkbox"/> Both dependencies and impacts

[Fixed row]

(2.2.1) Does your organization have a process for identifying, assessing, and managing environmental risks and/or opportunities?

	Process in place	Risks and/or opportunities evaluated in this process	Is this process informed by the dependencies and/or impacts process?
	Select from: <input checked="" type="checkbox"/> Yes	Select from: <input checked="" type="checkbox"/> Both risks and opportunities	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(2.2.2) Provide details of your organization's process for identifying, assessing, and managing environmental dependencies, impacts, risks, and/or opportunities.

Row 1

(2.2.2.1) Environmental issue

Select all that apply

☒ Climate change

(2.2.2.2) Indicate which of dependencies, impacts, risks, and opportunities are covered by the process for this environmental issue

Select all that apply

☒ Dependencies

☒ Impacts

☒ Risks

☒ Opportunities

(2.2.2.3) Value chain stages covered

Select all that apply

- ☒ Direct operations
- ☒ Upstream value chain
- ☒ Downstream value chain
- ☒ End of life management

(2.2.2.4) Coverage

Select from:

- ☒ Full

(2.2.2.5) Supplier tiers covered

Select all that apply

- ☒ Tier 1 suppliers

(2.2.2.7) Type of assessment

Select from:

- ☒ Qualitative and quantitative

(2.2.2.8) Frequency of assessment

Select from:

- ☒ Annually

(2.2.2.9) Time horizons covered

Select all that apply

- ☒ Short-term
- ☒ Medium-term
- ☒ Long-term

(2.2.2.10) Integration of risk management process

Select from:

- ☒ Integrated into multi-disciplinary organization-wide risk management process

(2.2.2.11) Location-specificity used

Select all that apply

- ☒ Site-specific
- ☒ National

(2.2.2.12) Tools and methods used

Enterprise Risk Management

- ☒ Enterprise Risk Management
- ☒ Internal company methods

International methodologies and standards

- ☒ Environmental Impact Assessment
- ☒ IPCC Climate Change Projections
- ☒ Life Cycle Assessment

Databases

- ☒ Nation-specific databases, tools, or standards

Other

- ☒ Desk-based research
- ☒ External consultants
- ☒ Internal company methods
- ☒ Materiality assessment

(2.2.2.13) Risk types and criteria considered

Acute physical

- ☑ Drought
- ☑ Wildfires
- ☑ Heat waves
- ☑ Cold wave/frost
- ☑ Cyclones, hurricanes, typhoons

Chronic physical

- ☑ Heat stress
- ☑ Water stress
- ☑ Temperature variability
- ☑ Increased severity of extreme weather events
- ☑ Changing temperature (air, freshwater, marine water)

Policy

- ☑ Carbon pricing mechanisms
- ☑ Changes to international law and bilateral agreements
- ☑ Changes to national legislation
- ☑ Increased difficulty in obtaining operations permits
- ☑ Poor coordination between regulatory bodies

Market

- ☑ Availability and/or increased cost of certified sustainable material
- ☑ Availability and/or increased cost of raw materials
- ☑ Changing customer behavior
- ☑ Uncertainty in the market signals

Reputation

- ☑ Impact on human health
- ☑ Increased partner and stakeholder concern and partner and stakeholder negative feedback
- ☑ Stigmatization of sector

- ☑ Heavy precipitation (rain, hail, snow/ice)
- ☑ Flood (coastal, fluvial, pluvial, ground water)

- ☑ Changing precipitation patterns and types (rain, hail, snow/ice)

Technology

- ☒ Data access/availability or monitoring systems
- ☒ Transition to lower emissions technology and products
- ☒ Other technology, please specify :Transition to increasing renewable content Transition to increasing recycled content Transition to reusable products Transition to recyclable plastic products

Liability

- ☒ Exposure to litigation
- ☒ Non-compliance with regulations

(2.2.2.14) Partners and stakeholders considered

| <input checked="" type="checkbox"/> Suppliers | |

(2.2.2.15) Has this process changed since the previous reporting year?

Select from:

- ☒ No

(2.2.2.16) Further details of process

Our multi-disciplinary, company-wide Enterprise Risk Management (ERM) process is designed to respond to and monitor risks and opportunities across the business, including identification, assessment, prioritization, and assignment of ownership. It is a formalized framework that is embedded into and fed by our processes, which creates greater insight and durability. Climate-related risk management is integrated into our broader ERM process. Our ERM process applies to our direct operations, as well as upstream and downstream value chain partners. Through our ERM process, we assess risks more than once a year. The ERM register is populated with risks and opportunities that have been identified by the following business functions and processes: • Budget reviews • Business impact analysis • Area operating reviews (AORs) • Quarterly management operating reviews (QMORs) • Management representation process • Individual functions • Sustainability • Management Interviews Both the local operating review and corporate planning functions include assessment of risks and opportunities, dependencies and impacts across short- (0-5 years), medium- (5-10 years) and long-term (10-100 years) time horizons, incorporating market strategy, scenario analysis, and expected asset life. At the local

level, leaders assess current and potential assets, competitive analysis, risks and opportunities, growth plans, market dynamics and pricing, regulatory and legislative changes, and other market factors. Executive management meets on a quarterly basis, or more often, and discusses market trends and drivers, the business climate, innovation, risks and opportunities, regulatory and legislative changes, and other factors that influence our business strategy. Risks identified through both the business processes and the sustainability function include those that are directly linked to climate change, such as fuel and electricity consumption, our recycling and composting business, emissions from our fleet, emissions from our landfills and impacts of adverse weather. We periodically conduct physical risk assessments on each of our sites based on IPCC Shared socioeconomic pathways and incorporate this analysis in our risk management, business continuity, and capital management processes. These risks, impacts, opportunities, and dependencies are evaluated by the ERM team, reported to our ERM Council. The ERM Council provides governance over the ERM program by overseeing program effectiveness and monitoring key enterprise risks and opportunities, including those related to climate change, and their associated mitigation plans. The ERM Council includes select executives and reports to the Board through the Sustainability & Corporate Responsibility Committee.

[Add row]

(2.2.7) Are the interconnections between environmental dependencies, impacts, risks and/or opportunities assessed?

(2.2.7.1) Interconnections between environmental dependencies, impacts, risks and/or opportunities assessed

Select from:

☒ Yes

(2.2.7.2) Description of how interconnections are assessed

Interconnections between environmental dependencies, impacts, risks, and opportunities are assessed and incorporated into our process through both the enterprise risk management (ERM) process described in 2.2.2 and our general strategy and operations planning. Our core business of environmental services is dedicated to providing our customers with solutions to manage their environmental risks and impacts. As a result, our ability to navigate the interconnection of these concepts is essential to our success as a business. For example, the increasing likelihood of severe storms are a risk to our operations through damage to our assets and interruption of service. We use our ERM and business continuity processes to evaluate these risks, and incorporate the analysis in our operating plans. At the same time, the aftermath of extreme weather events often presents an opportunity as we provide disaster response support (e.g. oil spilling from a damaged vessel) and waste collection (e.g. dumpsters and hauling to clean-up damaged areas).

[Fixed row]

(2.4) How does your organization define substantive effects on your organization?

Risks

(2.4.1) Type of definition

Select all that apply

- ☒ Qualitative
- ☒ Quantitative

(2.4.2) Indicator used to define substantive effect

Select from:

- ☒ EBITDA

(2.4.3) Change to indicator

Select from:

- ☒ Absolute decrease

(2.4.5) Absolute increase/ decrease figure

1000000

(2.4.6) Metrics considered in definition

Select all that apply

- ☒ Frequency of effect occurring
- ☒ Time horizon over which the effect occurs
- ☒ Likelihood of effect occurring

(2.4.7) Application of definition

Criteria used to determine what constitutes substantive financial and strategic business impacts were developed by our enterprise risk management (ERM) team with the guidance and approval of the Board and executive management. These criteria are applicable to climate risks and other corporate wide risks. The quantifiable indicators of substantive financial impact include lost operating income, which may include a loss of revenue or increase in costs above certain dollar amounts. Quantifiable indicators of substantive strategic impact may include substantial fines or suspension of operations due to legal, regulatory or compliance matters; operational challenges that result in major impacts on customer experience in multiple regions or major disruption to routine products/services; or brand/reputational impacts which result in significant national media coverage/extended image problem. Any of these impacts alone or in combination may elevate a topic to the level of being considered substantive. For example, each risk is scored by impact, resulting in a negligible, minor, moderate, major or catastrophic risk categorization. The likelihood and probability are then estimated, and the risks are plotted into a matrix that facilitates discussions about risk management. For the purposes of assessing climate-related risks, these analyses may consider financial impacts at or above \$1M.

[Add row]

C3. Disclosure of risks and opportunities

(3.1) Have you identified any environmental risks which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future?

Climate change

(3.1.1) Environmental risks identified

Select from:

☒ Yes, both in direct operations and upstream/downstream value chain

Plastics

(3.1.1) Environmental risks identified

Select from:

☒ No

(3.1.2) Primary reason why your organization does not consider itself to have environmental risks in your direct operations and/or upstream/downstream value chain

Select from:

☒ Evaluation in progress

(3.1.3) Please explain

As part of our core environmental services business, we manage streams of waste plastics, including collection, transportation, recycling, and disposal. We continue to evaluate the environmental risks and opportunities associated with our business including the opportunity to reuse and recycle plastics as a result of our operations or to permanently sequester them in a landfill.

[Fixed row]

(3.1.1) Provide details of the environmental risks identified which have had a substantive effect on your organization in the reporting year, or are anticipated to have a substantive effect on your organization in the future.

Climate change

(3.1.1.1) Risk identifier

Select from:

☒ Risk1

(3.1.1.3) Risk types and primary environmental risk driver

Policy

☒ Changes to regulation of existing products and services

(3.1.1.4) Value chain stage where the risk occurs

Select from:

☒ Upstream value chain

(3.1.1.6) Country/area where the risk occurs

Select all that apply

☒ Canada

☒ United States of America

(3.1.1.9) Organization-specific description of risk

According to an industry trade publication, we operate the 5th largest vocational fleet in the U.S. Fuel costs are volatile and a substantial change in fuel costs, including changes in fuel-related regulations, could materially affect our cost of operations. We depend on fuel purchased in the open market to operate our collection and transfer trucks and other equipment used for collection, transfer and disposal. Historically, we have employed fuel-recovery fees for our customers to limit impacts of unexpected increases in fuel prices. We engage in regulatory monitoring to ensure our fleet programs comply with current and future legal requirements. The US EPA Renewable Fuel Standard affects the type of fuel we use in our fleet. Pursuant to the Energy Independence and Security Act of 2007, the EPA establishes annual renewable fuel volume requirements for four different categories of renewable fuels (renewable fuel, advanced biofuel, cellulosic biofuel, and

biomass-based diesel). Additionally, in California, the Advanced Clean Fleets (ACF) rule requires a percentage of our fleet to be electric vehicles (EVs) at an increasing rate over the next 20 years. These regulations are one of many factors that may affect the cost of the fuel we use.

(3.1.1.11) Primary financial effect of the risk

Select from:

☒ Increased direct costs

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

☒ Medium-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

☒ More likely than not

(3.1.1.14) Magnitude

Select from:

☒ Medium-low

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

We would expect increased regulation to impact our financial position by increasing the direct operating cost of our fleet through fuel cost increases. The immediate impact of fuel cost increase would be reduced margins, though we would likely implement a fuel recovery fee to recover increase. We would potentially recover full profitability, however, higher fuel costs could increase our working capital needs. Please see the following columns for more information.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

☒ Yes

(3.1.1.21) Anticipated financial effect figure in the medium-term – minimum (currency)

0

(3.1.1.22) Anticipated financial effect figure in the medium-term – maximum (currency)

163870000

(3.1.1.25) Explanation of financial effect figure

*We assessed the impact of a carbon tax as an example of a regulatory device that could impact our business because it is a very specific type of policy lever that is readily modeled using scenarios to determine financial impact and demonstrate the resilience of our strategy. The estimated fleet fuel emissions cost impact is based on numerous assumptions and estimates, is subject to numerous uncertainties, and does not necessarily reflect or predict the actual impact on the Company's fleet fuel emissions costs. We expect that we will achieve a 35% reduction below our 2017 fleet emissions of 1,867,472 mtCO₂e, aligned with our emissions reduction goal, with projected 2030 fleet emissions of 1,213,857. We assessed the impact from a \$135/ton carbon tax in 2030, based on IEA and the Announced Pledges Scenario (APS) as $\$135 * 1,213,857 \text{ mtCO}_2\text{e} = \$163,870,000$. For more information on the impact a carbon tax would have on our operations and the ways we are seeking to mitigate its impact please see our TCFD response at: <https://republicservicesinc.gcs-web.com/static-files/2024-Republic-Services-TCFD-Addendum.pdf>*

(3.1.1.26) Primary response to risk

Infrastructure, technology and spending

☒ Increase environment-related capital expenditure

(3.1.1.27) Cost of response to risk

37400000

(3.1.1.28) Explanation of cost calculation

The cost of response is based on the upfront, incremental capital expenditure to invest in 100 electric vehicles, purchased in lieu of replacing 100 CNG vehicles (\$37.4M).

(3.1.1.29) Description of response

We continue to monitor the potential for carbon taxes on both a national and regional level at the same time that we expand our alternative fuel fleet. We continually assess the impacts of changes in fuel costs, and whether due to market, regulatory, or other factors, we evaluate options to mitigate potential impacts and implement

mitigation actions. Fuel costs represent a significant operating expense. When economically practical, we may enter into fuel hedges or engage in other strategies to mitigate market risk. We had no fuel hedges in place during the reporting year. When fuel prices increase, we charge fuel recovery fees to a majority of our customers, though we are unable to charge such fees to all customers. We have long been a leader in alternative fuel vehicles, beginning with natural gas vehicles until our partnership with OEMs allowed electric vehicles to become commercially viable. Since 2023 we have visibly rolled out EV trucks from several manufacturers. Using electric vehicles provides us a competitive advantage in communities with strict clean emission initiatives that focus on protecting the environment, while mitigating our exposure to diesel commodity risk and the potential of a carbon tax.

Climate change

(3.1.1.1) Risk identifier

Select from:

☒ Risk2

(3.1.1.3) Risk types and primary environmental risk driver

Acute physical

☒ Cyclone, hurricane, typhoon

(3.1.1.4) Value chain stage where the risk occurs

Select from:

☒ Direct operations

(3.1.1.6) Country/area where the risk occurs

Select all that apply

☒ Canada

☒ United States of America

(3.1.1.9) Organization-specific description of risk

Our operations could be adversely impacted by extended periods of inclement weather, or by increased severity of weather resulting from climate change, some of which we likely are already experiencing. Recent studies suggest that global warming is occurring faster than previously projected, with the US EPA projecting a 2° to 10° Fahrenheit temperature increase in the United States by the end of the century. In addition to sea level rise, this temperature increase is expected to result in

more severe droughts, floods, and other extreme weather events. Any of these factors could increase the volume of waste collected under our existing contracts; interfere with collection, transfer station and landfill operations, delay the development of landfill capacity; or reduce the volume of waste generated by our customers. In addition, adverse weather conditions may result in the temporary suspension of our operations, which can affect our operating results in the affected regions during those periods. Notably, while weather events such as hurricanes may increase the amount of material that is sent to our landfills, they could negatively impact the quality of recycling materials, making those materials unsalvageable and therefore decreasing profitability.

(3.1.1.11) Primary financial effect of the risk

Select from:

☒ Increased direct costs

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

☒ Short-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

☒ Very likely

(3.1.1.14) Magnitude

Select from:

☒ Medium-low

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

We expect there to continue to be major weather and climate events that affect our business over the course of each year. In the short-term, the effect on the organization will depend on the types and frequency of events and the necessary response. In the medium- and long-term, the organization will continue to implement appropriate risk management practices to adapt the business to the existing environment. We expect periodic increased operating costs to manage the immediate impact, with potential capital costs coming in the longer-term to adapt to changes in climate activity.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

☒ Yes

(3.1.1.19) Anticipated financial effect figure in the short-term – minimum (currency)

164000

(3.1.1.20) Anticipated financial effect figure in the short-term – maximum (currency)

1968000

(3.1.1.25) Explanation of financial effect figure

We calculated the minimum financial impact figure by taking an average of tons of commodities sold per month across various facilities in 2024 (2.5 million tons/year across 75 facilities averages 2,778 tons/month at one facility) multiplied by the average sale of materials (SOM) value for 2022 (\$164/ton used for this analysis). This estimates that the loss for one month of downtime at an average-sized facility caused by a weather event would be approximately \$456,000. The financial impact would be greater from multiple months of downtime at average-size facilities or closures at larger facilities, which can produce 12,000 tons per month. The financial loss from a one month closure of one of these larger facilities would be approximately \$1,968,000. As an example, we had to shut down a large recycling facility in New Orleans for 1 month after Hurricane Katrina, which resulted in approximately \$1.5M in lost recycling revenue (inflation-adjusted to 2023 dollars).

(3.1.1.26) Primary response to risk

Policies and plans

☒ Amend the Business Continuity Plan

(3.1.1.27) Cost of response to risk

2500000

(3.1.1.28) Explanation of cost calculation

Costs to manage this risk continue to be incorporated into our business-as-usual activities, but do include insurance premiums, program management costs associated with developing and maintaining the Emergency Preparedness and Disaster Recovery Plan for Field Staff, training that is done each year to make sure the local coordinator is up to speed, and cost to maintain back-up generators. In total, this cost is approximately \$2.5M.

(3.1.1.29) Description of response

Republic reviews physical risks to our business as part of a risk management process, which is ongoing, and considered more than once per year. We have also initiated a periodic Physical Risk Assessment based on Shared Socioeconomic Pathways developed by IPCC. As we identify and prioritize critical risks to our physical assets, we implement the changes or management programs, to mitigate impacts. We have in place and continue to update an Emergency Preparedness and Disaster Recovery Plan for Field Staff and perform local-level training on an ongoing basis. Each Area President (AP) owns this plan and its implementation for their respective region. The Plan not only prepares Republic for impact to our assets and operations, but it also ensures business continuity after severe weather events by providing field staff with guidance in preparing for an emergency or recovery from a natural disaster. Republic starts planning as soon as we learn of an impending storm. For example, in 2019, Hurricane Dorian was bearing down on the Southeast, where Republic has collection, recycling and landfill operations. The business continuity teams prepared for protection of our people and their families, our assets and our customers. We discuss and arrange shelter locations and ensure that all employees are safe and secure before the storm strikes. We also move trucks and equipment to high ground, secure recycling facilities and place landfills into safe mode. Finally, we provide guidance to our customers to prepare their carts and containers to withstand the storm and to prevent them from becoming a hazard during the storm. These actions help to minimize impact to our people and assets during the storm and ensure we can be back up and running as soon as possible after the storm passes. Republic also maintains property and other forms of insurance to protect against catastrophic losses of assets.

☒ Direct operations

(3.1.1.6) Country/area where the risk occurs

Select all that apply

- ☒ Canada
- ☒ United States of America

(3.1.1.9) Organization-specific description of risk

We purchase or collect and process recyclable materials such as paper, cardboard, plastics, aluminum and other metals for sale to third parties. In 2024, recycling and organics processing operations accounted for 2.5% of our total revenue. Our results of operations may be affected by changing prices or market requirements for recyclable materials. The resale and purchase prices of, and market demand for, recyclable materials are volatile due to changes in economic conditions, governmental regulation, and numerous other factors beyond our control. For instance, in 2017 the Chinese government imposed strict limits on the import of recyclable materials. These limitations significantly decreased the global demand for recyclable materials and resulted in lower commodity prices. In the American context, consumer handling and sorting of recyclables is limited in magnitude and quality. Lower quality and poorly sorted recyclables incur increased handling costs and reduced commodity value. Our performance may be affected by changing prices or market requirements for recyclable materials. The resale and purchase prices of, and market demand for, recyclable materials are volatile due to changes in economic conditions, regulatory changes, lack of market/social drivers and numerous other factors beyond our control.

(3.1.1.11) Primary financial effect of the risk

Select from:

- ☒ Change in revenue mix and sources

(3.1.1.12) Time horizon over which the risk is anticipated to have a substantive effect on the organization

Select all that apply

- ☒ Short-term

(3.1.1.13) Likelihood of the risk having an effect within the anticipated time horizon

Select from:

- ☒ Very likely

(3.1.1.14) Magnitude

Select from:

- ☒ Medium-low

(3.1.1.16) Anticipated effect of the risk on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Volatility in the value of recycled commodities directly impacts our revenue and cost structure for our recycling business. As discussed below, our revenue and profitability move in-line with commodity prices, though we have worked to pass through much of the volatility to our customers to focus on capturing the value of our services.

(3.1.1.17) Are you able to quantify the financial effect of the risk?

Select from:

☒ Yes

(3.1.1.19) Anticipated financial effect figure in the short-term – minimum (currency)

0

(3.1.1.20) Anticipated financial effect figure in the short-term – maximum (currency)

11

(3.1.1.25) Explanation of financial effect figure

At 2024 volumes and mix of materials, we believe a \$10 per ton change in the price of recycled commodities has the potential to change both annual revenue and operating income by approximately \$11 million. We calculate this using several factors that impact our operating costs and revenues. We then compare the difference in costs and revenues resulting from the associated adjustments in the price of our commodities sold. The potential financial impact includes factors beyond volume and material mix, including municipal billing cycles and other factors that impact billed rates.

(3.1.1.26) Primary response to risk

Engagement

☒ Engage in multi-stakeholder initiatives

(3.1.1.27) Cost of response to risk

0

(3.1.1.28) Explanation of cost calculation

The cost of management of this risk includes our community training programs and materials, and recycling contract management program. However, implementation of the training program and the contract management program result in positive benefits through cleaner recycling streams, and therefore greater revenue, that outweigh all the management costs. Therefore, this cost was negative (zero entered in the field above, as a negative number is not allowed).

(3.1.1.29) Description of response

In order to drive increased demand for and the value of recycling, we actively provide education in to help consumers and businesses understand the value of recycling and the importance of proper separation of recyclables to minimize contamination. Republic's Recycling Simplified consumer education campaign won the 2019 Best Recycling Public Education Program Award from the National Waste & Recycling Association, which recognizes innovators and leaders in the industry who have made substantial contributions to American recycling through partnerships, public education and innovations in recycling facilities. After the 2018 launch of the Recycling Simplified initiative and a supporting national public relations campaign, we executed a \$2 million multichannel marketing campaign in 2019 in six cities to further help reduce contamination rates by focusing on what and how to recycle correctly. The local campaigns employed radio ads, billboards and social media to reach residents. In two of the markets, pre- and post-campaign audits were conducted on residential recycling routes, which found that contamination rates had decreased significantly in both communities. In addition, we are working with our customers to move to a more sustainable economic model that includes a fee for the services we provide and a more equitable commodity risk sharing arrangement. This action reduces our risk exposure in the future. We also engage with policymakers to ensure that public policy supports a sustainable business model for recycling, in-line with desirable public outcome.

[Add row]

(3.1.2) Provide the amount and proportion of your financial metrics from the reporting year that are vulnerable to the substantive effects of environmental risks.

Climate change

(3.1.2.1) Financial metric

Select from:

☒ OPEX

(3.1.2.2) Amount of financial metric vulnerable to transition risks for this environmental issue (unit currency as selected in 1.2)

163870000

(3.1.2.3) % of total financial metric vulnerable to transition risks for this environmental issue

Select from:

☒ 1-10%

(3.1.2.4) Amount of financial metric vulnerable to physical risks for this environmental issue (unit currency as selected in 1.2)

3366000000

(3.1.2.5) % of total financial metric vulnerable to physical risks for this environmental issue

Select from:

☒ 31-40%

(3.1.2.7) Explanation of financial figures

Transition risk identified in Exhibit S5 of our 2024 TCFD is \$163,870,000. We divided that by 2024 OPEX from p.66 of our most recent 10-K of \$9,350,000,000 to get 1.8%. We defined the % of total financial metric in that is vulnerable to physical risks as equal to the % of assets subject to Extreme Heat (as measured by annual count of days when the maximum temperature surpassed 35 degrees C under SSP2-4.5, which comes from Exhibit A3 of our 2024 TCFD Report). In Exhibit A3, we see that 36% of our assets would be expected to experience high or very high number of days above 35 degrees C. We multiplied that % by the same OPEX of \$9,350,000,000 to arrive at \$1,144,726,500. 2024 TCFD <https://republicservicesinc.gcs-web.com/static-files/2024-Republic-Services-TCFD-Addendum.pdf> 2024 10-K <https://investor.republicservices.com/static-files/7ce6ac05-3e50-415b-a45b-42173621bfba>

Select from:

☒ Direct operations

(3.6.1.5) Country/area where the opportunity occurs

Select all that apply

- ☒ Canada
- ☒ United States of America

(3.6.1.8) Organization specific description

We foresee increased revenues resulting from increased demand for products and services, driven by a broad societal trend toward landfill diversion, due in part to concerns over climate change. We are actively looking for ways to reduce organic materials in our landfills that generate methane upon decomposition, like fiber, food, and yard waste. Recycling and composting remove organics from landfills and returns recycled materials to industries that otherwise must source virgin materials with heavy GHG footprints. We have invested in growing and upgrading our recycling and organics processing capabilities, enabling us to more efficiently handle and capture materials. We have publicly committed to increase our recovery of key materials 40% above 2017 levels by 2030, supported by the development of our Polymer Center network, North America's first integrated plastics recycling facility, managing recyclables from collection to delivery of high-quality recycled content for consumer packaging. Our first Polymer Center opened in Las Vegas in 2023, with a second such facility under construction in Indianapolis. Republic anticipates opening at least two more centers to provide national coverage and further drive circularity.

(3.6.1.9) Primary financial effect of the opportunity

Select from:

- ☒ Increased revenues resulting from increased demand for products and services

(3.6.1.10) Time horizon over which the opportunity is anticipated to have a substantive effect on the organization

Select all that apply

- ☒ The opportunity has already had a substantive effect on our organization in the reporting year

(3.6.1.12) Magnitude

Select from:

- ☒ Medium

(3.6.1.13) Effect of the opportunity on the financial position, financial performance and cash flows of the organization in the reporting period

We are able to retain and gain business by providing alternative methods of managing waste, such as recycling and composting. We are investing in innovative recycling technology and have expanded our organics operations to help customers meet their diversion goals. We are committed to meeting the increased market for recycling and recycled commodities, which will translate to increased revenue and margins.

(3.6.1.15) Are you able to quantify the financial effects of the opportunity?

Select from:

☒ Yes

(3.6.1.16) Financial effect figure in the reporting year (currency)

1681700000

(3.6.1.23) Explanation of financial effect figures

Our 2024 recycling and organics collection, processing, and commodity sales were 1,681 million or 10% of our total revenue of 16,032 million. This revenue was made possible by our continued investment in our recycling and organics diversion capabilities, from collection to processing to returning those materials to the marketplace.

(3.6.1.24) Cost to realize opportunity

119100000

(3.6.1.25) Explanation of cost calculation

In 2024 we invested \$114.2M into upgrading our recycling facilities, and an additional \$5M in organics processing infrastructure to more efficiently handle and capture materials, totaling the \$119.1M reported here. Upgrades include the use of robotics and advanced sorting equipment, such as disk screens, magnets and optical sorters, to identify and separate different kinds of paper, metals, plastics and other materials increasing efficiency and maximizing our recycling volume. Many of Republic's composting facilities are technologically advanced, using mechanical aeration to speed up the biological process and reduce odors. The facility at the Otay Landfill in Chula Vista, Calif., is an innovative example – it's completely off the grid, using solar-powered fans and a cover technology that requires little energy consumption and traps odors, dust and emissions.

(3.6.1.26) Strategy to realize opportunity

We continue to invest in proven technologies to control costs and to simplify and streamline recycling for our customers. As of December 31, 2024, we operated 75 recycling facilities and have publicly committed to increase our recovery of key materials by 40% from 2017 to 2030. The investments described enabled us to support the recycling of 5.3 million short tons of traditional recyclables and 1.1 million short tons of organics, and to profitably sell 2.5 million short tons of recyclables and organics in 2024.

(3.6.1.3) Opportunity type and primary environmental opportunity driver

Products and services

☒ Increased sales of existing products and services

(3.6.1.4) Value chain stage where the opportunity occurs

Select from:

☒ Direct operations

(3.6.1.5) Country/area where the opportunity occurs

Select all that apply

☒ Canada

☒ United States of America

(3.6.1.8) Organization specific description

Republic provides recycling, solid waste, and broader environmental services throughout North America, where we have seen an increase in frequency of severe weather events over the last decade. While these events can cause service disruption during the actual storms, the clean-up efforts required after an event typically result in an increase in demand for our services due to storm damage to buildings, infrastructure, trees and other natural areas that require quick, reliable transport and responsible disposal, including recycling and emergency response. We have business continuity plans in place for severe weather, natural disasters and other emergencies— hurricanes, tornadoes, flooding, winter storms, earthquakes and wildfires, among others—to help limit disruptions in our operations and help ensure the continuity of our services.

(3.6.1.9) Primary financial effect of the opportunity

Select from:

☒ Increased revenues resulting from increased demand for products and services

(3.6.1.10) Time horizon over which the opportunity is anticipated to have a substantive effect on the organization

Select all that apply

☒ Short-term

(3.6.1.11) Likelihood of the opportunity having an effect within the anticipated time horizon

Select from:

☒ Likely (66–100%)

(3.6.1.12) Magnitude

Select from:

☒ Medium-low

(3.6.1.14) Anticipated effect of the opportunity on the financial position, financial performance and cash flows of the organization in the selected future time horizons

Providing disposal services during storm cleanup has the potential to increase volumes to our disposal sites, thus increasing revenue and profit.

(3.6.1.15) Are you able to quantify the financial effects of the opportunity?

Select from:

☒ Yes

(3.6.1.17) Anticipated financial effect figure in the short-term - minimum (currency)

0

(3.6.1.18) Anticipated financial effect figure in the short-term – maximum (currency)

10000000

(3.6.1.23) Explanation of financial effect figures

Our operations can be favorably affected by severe weather, which can increase the volume of waste in situations where we are able to charge for our additional services or provide services when our competitors are not able to operate due to storm damage to their assets or operations. Republic estimates revenue from these events to range from \$1-10 million, based on the amount of incremental material created by the storm and Republic's market share in the affected areas. As an example, the Solid Waste Association of North America estimated that Hurricane Michael in 2018 resulted in 13 million tons of storm debris in two counties. Assuming 75% of storm debris is taken to landfills at an average FEMA landfill rate of \$10/ton, this would result in \$97.5M of incremental revenue opportunity. If Republic was awarded a 10% share of this business, we would receive \$9.75M in storm related revenue. This revenue can be offset or exceeded by costs for overtime, extra hauling distances, etc.

(3.6.1.24) Cost to realize opportunity

7000000

(3.6.1.25) Explanation of cost calculation

We estimate that profitability of this business would be slightly lower than our corporate average. Therefore we apply a 30% EBITDA margin to the business, implying approximately \$7 m of costs.

(3.6.1.26) Strategy to realize opportunity

We have continued to invest capital into our Emergency Preparedness and Disaster Recovery Plans in to better position ourselves in the event of climate or natural disasters. This investment allowed us to make significant progress towards preparation plans in addition to yearly supply restocking. Our plan for field staff not only prepares us for impact to our assets, it also aims to keep our business, an essential service, up and running. The plan provides field staff with guidance in preparing for an emergency or recovery from a natural disaster. Republic starts planning as soon as we learn of an impending storm. For example, in 2019, Hurricane Dorian was bearing down on the Southeast, where Republic has significant operations. The business continuity teams planned in advance for protection of our people and their families, our assets and our customers. These actions helped minimize impact to our people and assets to ensure we were back up and running as soon as possible after the storm passed. Republic begins operations as soon as local emergency management officials give the go ahead. We begin by ensuring that all employees are accounted for and assess damage to their personal property. We also ensure they and their families have meals, clothing and daily necessities. Our teams then resume collection of solid waste and recycling once roads are clear and we provide storm debris removal where contracted by FEMA. Our early preparation generally enables us to be one of the first service providers back on the streets, which positions us well to win storm debris removal contracts and to pick up business where our competitors are not able to resume operations as quickly. The Plan was initially developed following the 2005 Hurricanes Katrina and Rita recovery efforts and continues to be evaluated and implemented annually.

- ☒ Approving and/or overseeing employee incentives
- ☒ Overseeing and guiding major capital expenditures
- ☒ Overseeing and guiding the development of a business strategy
- ☒ Overseeing and guiding acquisitions, mergers, and divestitures
- ☒ Monitoring compliance with corporate policies and/or commitments

(4.1.2.7) Please explain

Given the importance of corporate sustainability to our stakeholders, Republic created a dedicated Sustainability and Corporate Responsibility Committee (SCR) of the board in 2015. The SCR has responsibility for climate-related issues. From the Committee Charter, the Committee "...is appointed by the Board of Directors (the "Board") of Republic Services, Inc., a Delaware corporation (the "Company" or "Republic") to assist the Board in fulfilling its oversight responsibility and to act in an advisory capacity to the Company's management with respect to significant issues, strategies, goals, objectives, policies and practices that pertain to (1) Republic's sustainability performance including sustainability innovation; (2) Republic's corporate responsibilities that are of significance to the Company and its role as a socially responsible organization; (3) Republic's Environment, Health and Safety (EHS) programs; and (4) risks and opportunities facing the Company, including climate change, safety, environmental, regulatory and reputational risks and opportunities, and the practices by which these risks are managed and mitigated. The Committee also shall perform such other duties and responsibilities as may be delegated to it from time to time by the Board." One of the Board's decision-making responsibilities that directly impacts the Company's climate-related activities is the approval of our annual budget, which allocates funding for the Company's sustainability-related agenda.

[Fixed row]

(4.2) Does your organization's board have competency on environmental issues?

Climate change

(4.2.1) Board-level competency on this environmental issue

Select from:

☒ Yes

(4.2.2) Mechanisms to maintain an environmentally competent board

Select all that apply

- ☒ Consulting regularly with an internal, permanent, subject-expert working group
- ☒ Engaging regularly with external stakeholders and experts on environmental issues
- ☒ Integrating knowledge of environmental issues into board nominating process
- ☒ Regular training for directors on environmental issues, industry best practice, and standards (e.g., TCFD, SBTi)
- ☒ Having at least one board member with expertise on this environmental issue

(4.2.3) Environmental expertise of the board member

Experience

- ☒ Executive-level experience in a role focused on environmental issues
- ☒ Experience in an organization that is exposed to environmental-scrutiny and is going through a sustainability transition
- ☒ Active member of an environmental committee or organization

☒ Quarterly

(4.3.1.6) Please explain

The CDO reports to the CEO for day-to-day responsibilities and regularly reports to the Board of Directors and its committees, including the Sustainability & Corporate Responsibility Committee of the Board. The CDO is responsible for assessing current and future trends throughout sustainability and developing and implementing strategy to drive value from our sustainability related offerings.

[Add row]

(4.5) Do you provide monetary incentives for the management of environmental issues, including the attainment of targets?

Climate change

(4.5.1) Provision of monetary incentives related to this environmental issue

Select from:

☒ Yes

(4.5.2) % of total C-suite and board-level monetary incentives linked to the management of this environmental issue

10

(4.5.3) Please explain

As reported in our Proxy Statement, our annual cash incentive is subject to a Sustainability Modifier, which is an additional adjustment, up or down by up to 10 percentage points, based on the Company's interim performance on safety, talent and climate leadership goals. This sustainability modifier is "universal," meaning the adjustment is applied consistently for all corporate members of our senior management team, including our named executive officers. See page 66 of our 2025 Proxy <https://investor.republicservices.com/static-files/11a307e8-016d-4265-b28e-be9fdec018f7>.
[Fixed row]

(4.5.1) Provide further details on the monetary incentives provided for the management of environmental issues (do not include the names of individuals).

Climate change

(4.5.1.1) Position entitled to monetary incentive

Board or executive level

☒ Chief Executive Officer (CEO)

(4.5.1.2) Incentives

Select all that apply

☒ Bonus - % of salary

(4.5.1.3) Performance metrics

Targets

☒ Progress towards environmental targets

Emission reduction

☒ Implementation of an emissions reduction initiative

(4.5.1.4) Incentive plan the incentives are linked to

Select from:

☒ Short-Term Incentive Plan, or equivalent, only (e.g. contractual annual bonus)

(4.5.1.5) Further details of incentives

To ensure our annual short-term incentive compensation aligns with our Company values on sustainability and employee development and safety, we utilize a sustainability modifier as a component of our annual incentive program. The sustainability modifier is aligned around the sustainability pillars from our 2030 sustainability goals – safety, talent and climate leadership. Each pillar has one or more specific quantitative metrics such that achievement against that metric can result in an adjustment of the annual incentive achieved by senior executives, including our NEOs, upward or downward within a range of ten percentage points. For each pillar, the Talent & Compensation Committee also has the discretion to consider other factors that may impact the rating for a specific pillar. After a rating is determined for each pillar, the Talent & Compensation Committee aggregates these ratings to determine the sustainability modifier percentage that an NEO’s annual bonus should be adjusted up or down. This includes two of our 2030 Climate Leadership goals, one to increase recovery and circularity of key materials by 40% and a second to increase beneficial reuse of biogas 50%, both from a 2017 baseline. These goals both reduce emissions throughout our value chain, including emissions reduction impacts in our own operations.

(4.5.1.6) How the position’s incentives contribute to the achievement of your environmental commitments and/or climate transition plan

These incentives ensure buy-in and engagement at the highest levels of company leadership, with a real, measurable consequence when performance is not tracking towards targets (e.g., as reported on page 69 our 2024 Proxy, Executive incentive pay was reduced by 3% for 2023) and a motivation for executives to accelerate performance.

Select from:

- ☒ Yes, we have a public commitment or position statement in line with global environmental treaties or policy goals

(4.11.3) Global environmental treaties or policy goals in line with public commitment or position statement

Select all that apply

- ☒ Paris Agreement

(4.11.4) Attach commitment or position statement

Final GRI 7.25.25.pdf

(4.11.5) Indicate whether your organization is registered on a transparency register

Select from:

- ☒ Yes

(4.11.6) Types of transparency register your organization is registered on

Select all that apply

☒ Mandatory government register

(4.11.7) Disclose the transparency registers on which your organization is registered & the relevant ID numbers for your organization

Lobbying Disclosure Act of 1995 c/o Alignment Government Strategies Senate ID# 401103295-214, House ID# 425880021 c/o West Front Strategies Senate ID# 401103493-125, House ID# 427640012

(4.11.8) Describe the process your organization has in place to ensure that your external engagement activities are consistent with your environmental commitments and/or transition plan

Republic Services employees responsible for policy engagement actively participate in conversations related to our sustainability management, ensuring that we advocate for aligned with our policy positions (e.g., supporting the Paris Agreement), including engagement with positions of trade association.
[Fixed row]

(4.11.1) On what policies, laws, or regulations that may (positively or negatively) impact the environment has your organization been engaging directly with policy makers in the reporting year?

Row 1

(4.11.1.1) Specify the policy, law, or regulation on which your organization is engaging with policy makers

· Clean Fuels: advocacy on policies that transition medium and heavy-duty vehicles to cleaner fuel standards and/or electrification, e.g. Renewable Fuel Standard

(4.11.1.2) Environmental issues the policy, law, or regulation relates to

Select all that apply

☒ Climate change

(4.11.1.3) Focus area of policy, law, or regulation that may impact the environment

Energy and renewables

☒ Alternative fuels

(4.11.1.4) Geographic coverage of policy, law, or regulation

Select from:

☒ National

(4.11.1.5) Country/area/region the policy, law, or regulation applies to

Select all that apply

☒ United States of America

(4.11.1.6) Your organization's position on the policy, law, or regulation

Select from:

☒ Support with no exceptions

(4.11.1.8) Type of direct engagement with policy makers on this policy, law, or regulation

Select all that apply

☒ Regular meetings

☒ Participation in working groups organized by policy makers

☒ Discussion in public forums

☒ Responding to consultations

☒ Submitting written proposals/inquiries

☒ Participation in voluntary government programs

(4.11.1.9) Funding figure your organization provided to policy makers in the reporting year relevant to this policy, law, or regulation (currency)

390000

(4.11.1.10) Explain the relevance of this policy, law, or regulation to the achievement of your environmental commitments and/or transition plan, how this has informed your engagement, and how you measure the success of your engagement

We have an industry-leading ambition towards fleet electrification and expect to continue to expand our EV refuse truck fleet. We also participate in the development of landfill gas to renewable natural gas (RNG), and we power a fifth of our fleet with RNG. The Renewable Fuel Standard rules impact our ability to use and develop these critical, carbon-avoiding technologies successfully.

(4.11.1.11) Indicate if you have evaluated whether your organization's engagement on this policy, law, or regulation is aligned with global environmental treaties or policy goals

Select from:

☒ Yes, we have evaluated, and it is aligned

(4.11.1.12) Global environmental treaties or policy goals aligned with your organization's engagement on this policy, law or regulation

Select all that apply

☒ Paris Agreement

[Add row]

(4.11.2) Provide details of your indirect engagement on policy, law, or regulation that may (positively or negatively) impact the environment through trade associations or other intermediary organizations or individuals in the reporting year.

Row 1

(4.11.2.1) Type of indirect engagement

Select from:

☒ Indirect engagement via a trade association

(4.11.2.4) Trade association

North America

☒ Other trade association in North America, please specify :National Waste and Recycling Association

(4.11.2.5) Environmental issues relevant to the policies, laws, or regulations on which the organization or individual has taken a position

Select all that apply

☒ Climate change

(4.11.2.6) Indicate whether your organization's position is consistent with the organization or individual you engage with

Select from:

☒ Consistent

(4.11.2.7) Indicate whether your organization attempted to influence the organization or individual's position in the reporting year

Select from:

☒ Yes, and they have changed their position

(4.11.2.8) Describe how your organization's position is consistent with or differs from the organization or individual's position, and any actions taken to influence their position

We regularly evaluate positions of the organization with respect to those positions of our company, and where there are gaps, we voice our opinion in direct engagement with NWRA leadership, in conversations with other members, and in group meetings. We generally have constructive engagements with the organization and its leadership in working towards positions that benefit the industry and our policy.

(4.11.2.9) Funding figure your organization provided to this organization or individual in the reporting year (currency)

537250

(4.11.2.10) Describe the aim of this funding and how it could influence policy, law or regulation that may impact the environment

The funding represents our membership dues, granting us the same access to the organization, its events, and its resources as is granted to other members. This includes advancing policies that increase opportunities for greater circularity and beneficial climate impacts.

(4.11.2.11) Indicate if you have evaluated whether your organization's engagement is aligned with global environmental treaties or policy goals

Select from:

☒ Yes, we have evaluated, and it is aligned

(4.11.2.12) Global environmental treaties or policy goals aligned with your organization's engagement on policy, law or regulation

Select all that apply

☒ Paris Agreement

[Add row]

(4.12) Have you published information about your organization's response to environmental issues for this reporting year in places other than your CDP response?

Select from:

☒ Yes

(4.12.1) Provide details on the information published about your organization's response to environmental issues for this reporting year in places other than your CDP response. Please attach the publication.

Row 1

(4.12.1.1) Publication

Select from:

☒ In mainstream reports, in line with environmental disclosure standards or frameworks

(4.12.1.2) Standard or framework the report is in line with

Select all that apply

- ☒ GRI
- ☒ IFRS
- ☒ TCFD
- ☒ Other, please specify :UN SDGs

| <input checked="" type="checkbox"/> Reputation | |
| <input checked="" type="checkbox"/> Technology | |

(5.1.1.6) Temperature alignment of scenario

Select from:

- ☒ 2.5°C - 2.9°C

(5.1.1.7) Reference year

1997

(5.1.1.8) Timeframes covered

Select all that apply

- ☒ 2025
- ☒ 2030
- ☒ 2040
- ☒ 2050
- ☒ 2060

(5.1.1.9) Driving forces in scenario

Stakeholder and customer demands

☒ Consumer attention to impact

Regulators, legal and policy regimes

☒ Global regulation

Macro and microeconomy

☒ Domestic growth

☒ Globalizing markets

(5.1.1.10) Assumptions, uncertainties and constraints in scenario

We used the International Panel on Climate Change's Shared Socioeconomic Pathways 4.5 and 8.5, with the associated uncertainties and constraints laid out in their documentation: https://www.ipcc.ch/site/assets/uploads/2018/03/emissions_scenarios-1.pdf.

(5.1.1.11) Rationale for choice of scenario

We selected IPCC SSP 4.5 and SSP 8.5 to capture a range of plausible climate futures and better understand the resilience of our business under varying levels of physical and transition risk.

[Add row]

(5.1.2) Provide details of the outcomes of your organization's scenario analysis.

Climate change

(5.1.2.1) Business processes influenced by your analysis of the reported scenarios

Select all that apply

☒ Risk and opportunities identification, assessment and management

☒ Strategy and financial planning

☒ Resilience of business model and strategy

☒ Capacity building

☒ Target setting and transition planning

(5.1.2.2) Coverage of analysis

Select from:

☒ Organization-wide

(5.1.2.3) Summarize the outcomes of the scenario analysis and any implications for other environmental issues

Through our transition risk scenario analysis, we found that the IEA 2023 projections for carbon taxes are sufficiently high to be considered an incentive for the Company to reduce emissions as a cost-avoidance measure. The risk of incurring the projected carbon tax must be weighted by Company management when considered as part of our Enterprise Risk Management function and other business planning processes. The projected costs are considered in the business case to evaluate capital expenditures on emissions-reduction measures. Through our physical risk scenario analysis, we found that SSP5-8.5 represented an increase of 74.8% of our facilities experiencing temperature increases greater than 2 degrees Celsius, as compared to SSP2-4.5. At the same time, we saw a clear, though less pronounced increase in the number of our facilities facing water stress through decreased precipitation. These findings are being incorporated into our planning for the purposes of employee safety, facility maintenance and other operational considerations. These findings support the continued investment in employee safety programs, such as the Company's "101 Days of Summer," program promoting healthy employee behaviors during the hottest months of the year.

[Fixed row]

(5.2) Does your organization's strategy include a climate transition plan?

(5.2.1) Transition plan

Select from:

☒ Yes, but we have a climate transition plan with a different temperature alignment

(5.2.2) Temperature alignment of transition plan

Select from:

☒ Well-below 2°C aligned

(5.2.3) Publicly available climate transition plan

Select from:

☒ Yes

(5.2.4) Plan explicitly commits to cease all spending on, and revenue generation from, activities that contribute to fossil fuel expansion

Select from:

☒ No, but we plan to add an explicit commitment within the next two years

(5.2.6) Explain why your organization does not explicitly commit to cease all spending on and revenue generation from activities that contribute to fossil fuel expansion

We have not been told by a majority of our ownership (shareholders) that they wish for the company to engage in this action. We have also not heard this from a majority or significant portion of any other group of stakeholders (e.g., customers, employees, regulators, communities, etc.).

(5.2.7) Mechanism by which feedback is collected from shareholders on your climate transition plan

Select from:

☒ We have a different feedback mechanism in place

(5.2.8) Description of feedback mechanism

We conduct annual shareholder outreach, which covers progress towards our SBTi-approved goal, the basis of our climate transition plan. As reported in our 2024 Proxy Statement, during our 2023 shareholder outreach, we met with shareholders holding the majority of our outstanding shares (56%). See page 37 of our 2024 Proxy Statement for more details, including reference to our SBTi goal in the context of that annual outreach. <https://investor.republicservices.com/static-files/11a307e8-016d-4265-b28e-be9fdec018f7>

(5.2.9) Frequency of feedback collection

Select from:

☒ Annually

(5.2.10) Description of key assumptions and dependencies on which the transition plan relies

We expect climate change to continue occurring, so long as global emissions do not dramatically decrease. We understand that our ability to invest in the continued decarbonization of our own operations is dependent on our continued financial viability as a company. This may create the perception of tension from third parties, however, that is not our view. If a company that leads on climate transition were to invest in decarbonization at a level that the company cannot financially sustain,

any vacuum that arises would be filled by less responsible, more heavily emitting companies. We continue to lead on initiatives to divert materials from landfills, to electrify and therefore decarbonize our fleet, and to work with our customers to develop solutions that enable them to reduce emissions through partnership with us.

(5.2.11) Description of progress against transition plan disclosed in current or previous reporting period

In 2024, we emitted 21% lower Scope 1 and 2 GHG emissions than in 2017, the baseline of our 2030 SBTi-approved goal. That reduction represents significant progress towards our decarbonization.

(5.2.12) Attach any relevant documents which detail your climate transition plan (optional)

2024-Republic-Services-Sustainability-Report.pdf

(5.2.15) Primary reason for not having a climate transition plan that aligns with a 1.5°C world

Select from:

☒ Not an immediate strategic priority

(5.2.16) Explain why your organization does not have a climate transition plan that aligns with a 1.5°C world

Our current SBTi-approved goal is the basis of our strategy and that goal continues to be approved by SBTi. We recognize that any future SBTi-approved goal would need to be 1.5-degree aligned.

[Fixed row]

(5.3) Have environmental risks and opportunities affected your strategy and/or financial planning?

(5.3.1) Environmental risks and/or opportunities have affected your strategy and/or financial planning

Select from:

☒ Yes, both strategy and financial planning

(5.3.2) Business areas where environmental risks and/or opportunities have affected your strategy

Select all that apply

☒ Products and services

☒ Upstream/downstream value chain

☒ Operations

[Fixed row]

(5.3.1) Describe where and how environmental risks and opportunities have affected your strategy.

Products and services

(5.3.1.1) Effect type

Select all that apply

☒ Risks

☒ Opportunities

(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

☒ Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Recycling: Risks and opportunities related to the shifting market demand for waste solutions that result in fewer greenhouse gas emissions have influenced our municipal, commercial, and residential service offerings. Case study of substantive decisions - Republic created a strategic initiative in 2012 to provide recycling collection and processing services in markets with high demand in response to climate-related concerns of our customers. We partner with customers to develop new contractual arrangements that are dynamic and mutually beneficial, and incentivize improved recycling behaviors, bringing simplification to customers and the general public alike on what and how to recycle. Each year during our annual budgeting process we determine where to invest capital to expand, modernize or establish our recycling capabilities based on market demand as indicated through our annual Market Planning and Development Process. We are committed to recycling for the long term and continue to invest in technology that increases efficiencies and maximizes the recovery of higher-quality recyclables. We recognize our facilities must continually evolve to address consumer trends, as well as changing package designs and unprecedented levels of contamination.

Upstream/downstream value chain

(5.3.1.1) Effect type

Select all that apply

- ☒ Risks
- ☒ Opportunities

(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

- ☒ Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Lower emission fuel/energy sources: Risks and opportunities related to the market demand for lower emission fuel sources and the desire to insulate our business from potential regulations on fossil fuel have influenced our supply chain strategy with our key truck/engine suppliers. Case study of substantive decisions - Leveraging lower-emission fuel sources requires working with major truck/engine suppliers and developing relationships with new fuel and fueling station suppliers. As the operator of one of the largest fleets in the country, these efforts are strategic to our supply chain department. Republic has worked with key suppliers over the past several years to develop and deploy clean fuel engines (CNG), as well as develop and instal CNG fueling stations. Our previous investments in CNG trucks and fueling stations made the use of RNG seamless. We have worked with suppliers to create and purchase RNG as a drop-in fuel replacement for CNG. Using trucks powered by RNG helped us meet our previous emissions goal, established in 2014, earlier than expected. Currently, 100% of our collection vehicles that operate on natural gas are powered by RNG. We are taking a leadership position in electric technology innovation for our fleet. This is a critical step toward reducing our environmental impact through lower fleet emissions and will also improve our total cost of ownership while providing competitive advantages in certain communities. We are partnering with multiple manufacturers to pilot electric-powered trucks. Our EV deployment continues with an expected increase in electric vehicles on the road each year. Time horizon – this opportunity spans short to medium-term as we are rolling out RNG-ready trucks today.

Operations

(5.3.1.1) Effect type

Select all that apply

- ☒ Risks
- ☒ Opportunities

(5.3.1.2) Environmental issues relevant to the risks and/or opportunities that have affected your strategy in this area

Select all that apply

- ☒ Climate change

(5.3.1.3) Describe how environmental risks and/or opportunities have affected your strategy in this area

Diesel Fuel Costs: Potential and realized increases to fossil fuel costs due to regulations and taxes aimed at reducing greenhouse gas emissions related to fossil fuels have led Republic to develop a strategic program to seek alternative sources of fuel to mitigate climate change impacts for our customers and our business. Case study of substantive decisions – Our recycling and waste collection trucks are complex, high-performance machines designed to be safe, comfortable and efficient. As we retire and replace older trucks, we are able to take advantage of advancements in alternative fuels in addition to safety technology and other modern efficiencies. Trucks running on alternative fuels like RNG emit fewer emissions and are less carbon intensive, which is why we continue to transition our fleet toward natural gas. Our alternative fuel programs are typically executed by Corporate and rolled out to the operations teams strategically based on the age of the vehicles in each local business unit and local demand for lower emissions collection vehicles. Powering our fleet with renewable natural gas is one way we are lowering our emissions. With one of the largest vocational fleets in the country, using innovative technology to reduce emissions is vital. Time horizon – this opportunity spans short to medium-term as we are purchasing RNG as a bridge fuel today and our initiative will span 5-10 more years as we continue to use RNG bridging the gap to the eventual transition to electric vehicles.

[Add row]

(5.3.2) Describe where and how environmental risks and opportunities have affected your financial planning.

Row 1

(5.3.2.1) Financial planning elements that have been affected

Select all that apply

☒ Capital expenditures

(5.3.2.2) Effect type

Select all that apply

☒ Risks

☒ Opportunities

(5.3.2.3) Environmental issues relevant to the risks and/or opportunities that have affected these financial planning elements

Select all that apply

☒ Climate change

(5.3.2.4) Describe how environmental risks and/or opportunities have affected these financial planning elements

Most of the states in which we operate landfills require counties and municipalities to formulate comprehensive plans to reduce the volume of solid waste deposited in landfills through waste planning, composting, recycling or other programs. In addition, many of the world’s largest companies are setting zero-waste goals. Although such actions help to protect our environment and reduce the impact of waste on climate change, they may reduce the volume of waste going to landfills which may affect the prices that we charge for landfill disposal. We identified a risk that we would not be able to operate our landfills at their current volumes or charge current prices for landfill disposal services due to possible decreases in demand for such services. This trend is related to the effects of the “evolving ton” which we have been tracking and managing for many years. Recycling is on the rise and the mix of materials is leaning towards lighter materials like plastic versus glass and steel. Our response in 2012 was to launch a strategic initiative to develop traditional recycling in select and prioritized markets to capitalize on this trend. This initiative primarily impacts revenue planning, because we have developed a revenue stream, and capital planning to develop the recycling infrastructure. Republic strategically built out this infrastructure and capability over the past decade. We continue to invest in our recycling and organics capabilities, including our first two Polymer Centers - North America’s first integrated plastics recycling network, the first of which opened in Las Vegas in 2023, quickly followed by another in Indianapolis. See additional details in CDP 3.6.1 and 3.6.2 regarding the amount of revenue, CapEx and other related metrics to these initiatives.

[Add row]

(5.4) In your organization’s financial accounting, do you identify spending/revenue that is aligned with your organization’s climate transition?

	Identification of spending/revenue that is aligned with your organization’s climate transition	Methodology or framework used to assess alignment with your organization’s climate transition
	Select from: <input checked="" type="checkbox"/> Yes	Select all that apply <input checked="" type="checkbox"/> Other methodology or framework

[Fixed row]

(5.4.1) Quantify the amount and percentage share of your spending/revenue that is aligned with your organization’s climate transition.

(5.4.1.9) Percentage share of selected financial metric planned to align in 2030 (%)

30

(5.4.1.12) Details of the methodology or framework used to assess alignment with your organization's climate transition

While we identified EU sustainable taxonomy activities Republic Services engages in, we did not perform an analysis to assess alignment with the criteria outlined in the EU Sustainable Taxonomy. Republic does not operate or sell products/services in the EU and is not subject to the EU Taxonomy for Sustainable Activities Taxonomy regulation. To report the CapEx (\$s) spend percentage in the reporting year, we identified the amount of spend capital that was allocated spent in the reporting year on the toward emission-reducing activities named in the EU Sustainable Taxonomy such as recycling and organics infrastructure and equipment material recovery from non-hazardous waste; landfill gas capture and utilization collection systems and to energy projects; sustainable vehicles and transportation infrastructure composting of biowaste; etc. To calculate the percentage share, we compared divided by to total company capital expenditures. To calculate the percentage planned in 2025 moving forward we assumed that total capex increased by 8%, which is in line with the prior 5-year period. To calculate the percentage planned in 2030, For future spend, calculations we included both knowledge of future increases on specific emissions-reducing climate-related activities and historical averages.

[Add row]

(5.10) Does your organization use an internal price on environmental externalities?

	Use of internal pricing of environmental externalities	Environmental externality priced

(5.11.3) Primary reason for not engaging with this stakeholder on environmental issues

Select from:

☒ Not an immediate strategic priority

(5.11.4) Explain why you do not engage with this stakeholder on environmental issues

Almost all emissions are in Scope 1, and we already engage with a number of our value chain partners.

[Fixed row]

(5.11.1) Does your organization assess and classify suppliers according to their dependencies and/or impacts on the environment?

Climate change

(5.11.1.1) Assessment of supplier dependencies and/or impacts on the environment

Select from:

☒ Yes, we assess the dependencies and/or impacts of our suppliers

(5.11.1.2) Criteria for assessing supplier dependencies and/or impacts on the environment

Select all that apply

☒ Contribution to supplier-related Scope 3 emissions

(5.11.1.3) % Tier 1 suppliers assessed

Select from:

☒ Less than 1%

(5.11.1.4) Define a threshold for classifying suppliers as having substantive dependencies and/or impacts on the environment

We targeted the top quartile of suppliers by spend, which corresponded to the top quartile by EEIO-calculated emissions. This was an engagement to understand how our suppliers respond to such requests and their current maturity on GHG and climate.

(5.11.1.5) % Tier 1 suppliers meeting the threshold for substantive dependencies and/or impacts on the environment

Select from:

☒ Less than 1%

(5.11.1.6) Number of Tier 1 suppliers meeting the thresholds for substantive dependencies and/or impacts on the environment

22

[Fixed row]

(5.11.2) Does your organization prioritize which suppliers to engage with on environmental issues?

Climate change

(5.11.2.1) Supplier engagement prioritization on this environmental issue

Select from:

☒ Yes, we prioritize which suppliers to engage with on this environmental issue

(5.11.2.2) Criteria informing which suppliers are prioritized for engagement on this environmental issue

Select all that apply

☒ In line with the criteria used to classify suppliers as having substantive dependencies and/or impacts relating to climate change

(5.11.2.4) Please explain

We targeted the top quartile of suppliers by spend, which corresponded to the top quartile by EEIO-calculated emissions. This was a pilot engagement to understand how our suppliers respond to such requests and their current maturity on GHG and climate.
[Fixed row]

(5.11.5) Do your suppliers have to meet environmental requirements as part of your organization's purchasing process?

Climate change

(5.11.5.1) Suppliers have to meet specific environmental requirements related to this environmental issue as part of the purchasing process

Select from:

☒ Yes, environmental requirements related to this environmental issue are included in our supplier contracts

(5.11.5.2) Policy in place for addressing supplier non-compliance

Select from:

☒ Yes, we have a policy in place for addressing non-compliance

(5.11.5.3) Comment

We continue to make progress toward our ambitious sustainability goals, which are designed to significantly benefit the environment and society while enhancing the foundation and profitability of our business for the long term. Republic is committed to doing our part to create a cleaner, safer, and healthier world where people thrive – not just for today, but for generations to come. As part of this commitment, we expect our suppliers to responsibly manage their impact on the environment and our communities by operating efficiently and minimizing adverse impacts while complying with all applicable federal, state, and local environmental laws and regulations. We also encourage our suppliers to develop a sustainable procurement program for their own suppliers.

☒ Less than 1%

(5.11.6.11) Procedures to engage non-compliant suppliers

Select all that apply

☒ Providing information on appropriate actions that can be taken to address non-compliance

(5.11.6.12) Comment

We continue to make progress toward our ambitious sustainability goals, which are designed to significantly benefit the environment and society while enhancing the foundation and profitability of our business for the long term. Republic is committed to doing our part to create a cleaner, safer, and healthier world where people thrive – not just for today, but for generations to come. As part of this commitment, we expect our Suppliers to responsibly manage their impact on the environment and our communities by operating efficiently and minimizing adverse impacts while complying with all applicable federal, state, and local environmental laws and regulations. We also encourage our suppliers to develop a sustainable procurement program for their own suppliers

[Add row]

(5.11.7) Provide further details of your organization's supplier engagement on environmental issues.

Climate change

(5.11.7.2) Action driven by supplier engagement

Select from:

☒ Adaptation to climate change

(5.11.7.3) Type and details of engagement

Capacity building

☒ Provide training, support and best practices on how to measure GHG emissions

(5.11.7.4) Upstream value chain coverage

Select all that apply

☒ Tier 1 suppliers

(5.11.7.5) % of tier 1 suppliers by procurement spend covered by engagement

Select from:

☒ Less than 1%

(5.11.7.6) % of tier 1 supplier-related scope 3 emissions covered by engagement

Select from:

☒ Unknown

(5.11.7.9) Describe the engagement and explain the effect of your engagement on the selected environmental action

Our measure of success for these initiatives is achievement of our GHG reduction goal. We must pursue tangible actions to collaborate with suppliers in pursuit of making progress toward the GHG reductions goal. We strive to maximize the collection of gas within the landfill to minimize potential fugitive emissions and maintain landfill health. This part of the engagement includes working with suppliers that can provide landfill gas collection equipment, help us develop landfill gas to energy projects, provide products and services that help us divert materials from landfills that create methane while decomposing and invest in new technologies to improve our landfill emissions controls. As an example, in 2019 we increased the amount of landfill gas recovered from our landfills by 3.12%. One contributor to this progress was Morrow Renewables, a recognized leader among renewable natural gas developers. Morrow Renewables built and operates the upgrades to the landfill gas to energy project at Blue Ridge Landfill in Texas. Morrow partners with Republic on three renewable energy projects in Texas. In addition, we work together with a number of suppliers to develop engines, equipment and fuel that improve our fuel efficiency and fleet carbon footprint, thereby reducing the climate impact of our services. Initiatives include CNG engines, CNG fueling stations, RNG fuel supply and purchase, and electric vehicles. We have been ramping up our use of alternative fuel vehicles since 2016, working with project developers, RNG suppliers, and electric vehicle manufacturers. In 2024, approximately 20% of our fleet operated on alternative fuel. Through these activities we were able to reduce our use of diesel fuel, resulting in a reduction in GHG emissions of over 250,000 MTCO₂e. Finally, our new building construction and retrofits adhere to the U.S. Green Building Council's Leadership in Energy and Environmental Design (LEED) standards. This includes using products and services that help us achieve energy reduction, water conservation measures and the use of sustainable materials and design principles that enhance comfort.

(5.11.7.10) Engagement is helping your tier 1 suppliers meet an environmental requirement related to this environmental issue

Select from:

☒ No, this engagement is unrelated to meeting an environmental requirement

(5.11.7.11) Engagement is helping your tier 1 suppliers engage with their own suppliers on the selected action

Select from:

☒ Unknown

[Add row]

(5.11.9) Provide details of any environmental engagement activity with other stakeholders in the value chain.

Climate change

(5.11.9.1) Type of stakeholder

Select from:

☒ Customers

(5.11.9.2) Type and details of engagement

Education/Information sharing

☒ Run an engagement campaign to educate stakeholders about the environmental impacts about your products, goods and/or services

(5.11.9.3) % of stakeholder type engaged

Select from:

☒ 51-75%

(5.11.9.4) % stakeholder-associated scope 3 emissions

Select from:

☒ 1-25%

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

As reported in our 2024 SASB response, about 75% of our residential customers receive recycling services, and about 25% of both small and large container customers receive recycling. We selected customers who receive recycling services because of the significant impact that recycling has on emission avoidance and recycling education helps us achieve our circular economy goal. We have estimated the full lifecycle emissions impacts from our diversion activities. Emissions from recycled materials and compost are calculated using methodologies and emission factors from the U.S. EPA's Waste Reduction Model (WARM), version 15. We offer numerous sources of recycling education to our customers including informational flyers with their invoices, our mobile app, as well as our recycling education campaign, Recycling Simplified program (<https://recyclingsimplified.com>), is available to our customers and the broader community. These campaigns are designed to inform our customers and the general public about the value of recycling and how to recycle correctly. Education helps reduce contamination in the recycle stream which improves the sustainability of recycling as an offering. In addition to lifecycle GHG reductions, successful recycling improves the financial returns to both our company and the customer, while improving the quality of recovered materials that are sold to downstream re-processors.

(5.11.9.6) Effect of engagement and measures of success

There are two measures of success for this initiative. One is a benefit for our customers and includes reduction of waste sent to landfills (pounds or tons). A second measure of success is our ability to return more recycled commodities to the economy. We have a goal related to Circular Economy, which is to increase recovery of key materials by 40% on a combined basis by 2030 (from a 2017 baseline). This public goal is achieved in part by educating customers on what materials to recycle. Education reduces contamination in the recycle stream which helps us recover more and provide higher quality commodities to re-processors. Recycling education provides benefits to both Republic, our customers and communities. Republic received and processed over 5 million metric tons of recycled material in our facilities in 2022. Every percentage of contamination represents increased cost to process, handle, re-process and dispose of non-recyclable material. Education can not only increase the amount of recyclables collected but also decrease the amount of contamination. Financial benefits to our customers from recycling include a reduction in their trash hauling service and lower landfill disposal charges. These benefits lead to lower GHG emissions in a variety of ways – reduced transportation, reduced emissions from landfills and reduced need for virgin materials (plastic, cardboard, etc.).

Climate change

(5.11.9.1) Type of stakeholder

Select from:

☒ Investors and shareholders

(5.11.9.2) Type and details of engagement

Education/Information sharing

☒ Share information on environmental initiatives, progress and achievements

(5.11.9.3) % of stakeholder type engaged

Select from:

☒ 51-75%

(5.11.9.4) % stakeholder-associated scope 3 emissions

Select from:

☒ 100%

(5.11.9.5) Rationale for engaging these stakeholders and scope of engagement

We seek to engage with holders of Republic Services stock, as they are owners of our company. By engaging with owners of more than 50% of outstanding shares, we have collectively engaged with majority ownership of the company.

(5.11.9.6) Effect of engagement and measures of success

Our individual engagements with our shareholders allow us insight into their views on our corporate governance practices, our sustainability journey, our differentiated operating model, and our compensation program, among other topics. For more information, see page 38 of our 2025 proxy statement, <https://investor.republicservices.com/static-files/11a307e8-016d-4265-b28e-be9fdec018f7>.

(5.13) Has your organization already implemented any mutually beneficial environmental initiatives due to CDP Supply Chain member engagement?

	Environmental initiatives implemented due to CDP Supply Chain member engagement	Primary reason for not implementing environmental initiatives
	<i>Select from:</i> <input checked="" type="checkbox"/> No, and we do not plan to within the next two years	<i>Select from:</i> <input checked="" type="checkbox"/> Not an immediate strategic priority

[Fixed row]

C6. Environmental Performance - Consolidation Approach

(6.1) Provide details on your chosen consolidation approach for the calculation of environmental performance data.

Climate change

(6.1.1) Consolidation approach used

Select from:

☒ Operational control

(6.1.2) Provide the rationale for the choice of consolidation approach

Republic defines its GHG Inventory organizational boundaries using the Operational Control Approach. All buildings/facilities (including landfills), vehicles (including fleet also known as collection vehicles), and heavy equipment over which the business has operational control are included in the GHG Inventory as Scope 1 & 2 emissions. Operational control is assumed for buildings/facilities, vehicles, and heavy equipment where the business has the authority to introduce and implement operating policies. This criterion is consistent with the current accounting and reporting practice of many companies that report on emissions from facilities that they operate. It is expected that, except in very rare circumstances, if the company or one of its subsidiaries is the operator of a facility, it will have the full authority to introduce and implement its operating policies and thus has operational control.

[Fixed row]

C7. Environmental performance - Climate Change

(7.1) Is this your first year of reporting emissions data to CDP?

Select from:

☒ No

(7.1.1) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?

(7.1.1.1) Has there been a structural change?

Select all that apply

☒ Yes, an acquisition

☒ Yes, a divestment

(7.1.1.2) Name of organization(s) acquired, divested from, or merged with

Miscellaneous small acquisitions and divestitures occurred throughout 2024

(7.1.1.3) Details of structural change(s), including completion dates

In 2024, Republic Services had acquisitions, consolidations, and divestitures from our portfolio. Due to the nature of growth in our industry, we frequently acquire and divest from assets.

[Fixed row]

(7.1.2) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?

(7.1.2.1) Change(s) in methodology, boundary, and/or reporting year definition?

Select all that apply

☒ Yes, a change in methodology

(7.1.2.2) Details of methodology, boundary, and/or reporting year definition change(s)

We have restated our annual emissions back to the baseline year (2017) to account for our acquisitions, divestitures, and methodology enhancements, aligning with our inventory management plan (IMP). Our methodology and boundary improvements include: • We improved the methodology used to calculate scope 3 category 1 Purchased Goods and Services; and • We improved the methodology used to calculate scope 3 category 5 Waste Generated in Operations. These revisions ensure that our goal to reduce scope 1 and 2 GHG emissions 35% below our 2017 baseline by 2030, approved by the Science Based Target initiative (SBTi) compares like-for-like assets across our reporting years. • We updated our methane GWP in alignment with new EPA guidance.

[Fixed row]

(7.1.3) Have your organization's base year emissions and past years' emissions been recalculated as a result of any changes or errors reported in 7.1.1 and/or 7.1.2?

(7.1.3.1) Base year recalculation

Select from:

☒ Yes

(7.1.3.2) Scope(s) recalculated

Select all that apply

☒ Scope 1

☒ Scope 2, location-based

☒ Scope 2, market-based

☒ Scope 3

(7.1.3.3) Base year emissions recalculation policy, including significance threshold

We regularly rebaseline our energy and emissions calculations, at a 1% significance threshold.

(7.1.3.4) Past years' recalculation

Select from:

☒ Yes

[Fixed row]

(7.2) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate emissions.

Select all that apply

☒ The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (Revised Edition)

☒ The Greenhouse Gas Protocol: Scope 2 Guidance

☒ The Greenhouse Gas Protocol: Corporate Value Chain (Scope 3) Standard

(7.3) Describe your organization's approach to reporting Scope 2 emissions.

	Scope 2, location-based	Scope 2, market-based
	Select from: <input checked="" type="checkbox"/> We are reporting a Scope 2, location-based figure	Select from: <input checked="" type="checkbox"/> We are reporting a Scope 2, market-based figure

[Fixed row]

(7.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1, Scope 2 or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure?

Select from:

☒ No

(7.5) Provide your base year and base year emissions.

Scope 1

(7.5.1) Base year end

12/31/2017

(7.5.2) Base year emissions (metric tons CO2e)

17022808

(7.5.3) Methodological details

This is the base year of Republic's SBT GHG reduction goal. Our base year emissions are restated when we make adjustments due to methodology or boundary changes.

Scope 2 (location-based)

(7.5.1) Base year end

12/31/2017

(7.5.2) Base year emissions (metric tons CO2e)

236368

(7.5.3) Methodological details

This is the base year of Republic's SBT GHG reduction goal. Our base year emissions are restated when we make adjustments due to methodology or boundary changes.

Scope 2 (market-based)

(7.5.1) Base year end

12/31/2017

(7.5.2) Base year emissions (metric tons CO2e)

233866

(7.5.3) Methodological details

This is the base year of Republic's SBT GHG reduction goal. Our base year emissions are restated when we make adjustments due to methodology or boundary changes.

Scope 3 category 1: Purchased goods and services

(7.5.1) Base year end

12/31/2017

(7.5.2) Base year emissions (metric tons CO2e)

288400

(7.5.3) Methodological details

This is the base year of Republic's SBT GHG reduction goal. Our base year emissions are restated when we make adjustments due to methodology or boundary changes.

Scope 3 category 2: Capital goods

(7.5.1) Base year end

12/31/2017

(7.5.2) Base year emissions (metric tons CO2e)

367288

(7.5.3) Methodological details

This is the base year of Republic's SBT GHG reduction goal. Our base year emissions are restated when we make adjustments due to methodology or boundary changes.

Scope 3 category 3: Fuel-and-energy-related activities (not included in Scope 1 or 2)

(7.5.1) Base year end

12/31/2017

(7.5.2) Base year emissions (metric tons CO2e)

525413

(7.5.3) Methodological details

This is the base year of Republic's SBT GHG reduction goal. Our base year emissions are restated when we make adjustments due to methodology or boundary changes.

Scope 3 category 4: Upstream transportation and distribution

(7.5.1) Base year end

12/31/2017

(7.5.2) Base year emissions (metric tons CO2e)

336605

(7.5.3) Methodological details

This is the base year of Republic's SBT GHG reduction goal. Our base year emissions are restated when we make adjustments due to methodology or boundary changes.

Scope 3 category 5: Waste generated in operations

(7.5.1) Base year end

12/31/2017

(7.5.2) Base year emissions (metric tons CO2e)

86177

(7.5.3) Methodological details

This is the base year of Republic's SBT GHG reduction goal. Our base year emissions are restated when we make adjustments due to methodology or boundary changes.

Scope 3 category 6: Business travel

(7.5.1) Base year end

12/31/2017

(7.5.2) Base year emissions (metric tons CO2e)

23309

(7.5.3) Methodological details

This is the base year of Republic's SBT GHG reduction goal. Our base year emissions are restated when we make adjustments due to methodology or boundary changes.

Scope 3 category 7: Employee commuting

(7.5.1) Base year end

12/31/2017

(7.5.2) Base year emissions (metric tons CO2e)

(7.5.3) Methodological details

This is the base year of Republic's SBT GHG reduction goal. Our base year emissions are restated when we make adjustments due to methodology or boundary changes.

Scope 3 category 8: Upstream leased assets

(7.5.1) Base year end

12/31/2017

(7.5.2) Base year emissions (metric tons CO2e)

4834

(7.5.3) Methodological details

This is the base year of Republic's SBT GHG reduction goal. Our base year emissions are restated when we make adjustments due to methodology or boundary changes.

Scope 3 category 9: Downstream transportation and distribution

(7.5.1) Base year end

12/31/2017

(7.5.3) Methodological details

Impacts and emissions for any downstream transportation and distribution have been incorporated as appropriate into the Waste Generated in Operations and/or Upstream Transportation & Distribution scope 3 GHG categories.

Scope 3 category 10: Processing of sold products

(7.5.1) Base year end

12/31/2017

(7.5.3) Methodological details

We are unable to separately estimate scope 3 emissions impacts from downstream processing of commodities we recover, process and sell. We have estimated the full lifecycle emissions impacts from our sold products (mainly recycled commodities) as negative, and therefore incompatible with current, normative GHG reporting. Lifecycle avoided emissions include the displacement of upstream mining, processing and transportation of materials that enter the waste stream, transportation and recovery/processing of commodities/compost by companies like Republic, as well as, downstream processing, transportation, and re-manufacturing where applicable. We calculate avoided emissions from recycled materials and compost we sell using methodologies and emission factors from the U.S. EPA's Waste Reduction Model (WARM), version 15, which can be found in C4.3b. We continue to evaluate and align with industry best practice reporting practices for this category.

Scope 3 category 11: Use of sold products

(7.5.1) Base year end

12/31/2017

(7.5.2) Base year emissions (metric tons CO2e)

8282

(7.5.3) Methodological details

This is the base year of Republic's SBT GHG reduction goal. Our base year emissions are restated when we make adjustments due to methodology or boundary changes.

Scope 3 category 12: End of life treatment of sold products

(7.5.1) Base year end

12/31/2017

(7.5.3) Methodological details

As Republic does not purchase its "raw materials" used to create its products sold (i.e. recycled materials and compost) but rather receives these raw material inputs through its primary services of waste management collection, the emissions impacts are not captured in our Purchased Goods and Services category. These raw

material inputs would, instead, be quantified as a separate upstream activity. Due to the complexity of this upstream value chain, the emissions associated with any raw material inputs are incorporated into our “Processing of sold products” lifecycle calculation in Category 10, above, per the EPA WARM model.

Scope 3 category 13: Downstream leased assets

(7.5.1) Base year end

12/31/2017

(7.5.3) Methodological details

Republic has not identified downstream leased assets in the completion of this questionnaire and has therefore determined that this Scope 3 category is not relevant to our business. All leased assets are included in the upstream leased assets category.

Scope 3 category 14: Franchises

(7.5.1) Base year end

12/31/2017

(7.5.3) Methodological details

Not relevant to our operations, Republic does not have any franchises.

Scope 3 category 15: Investments

(7.5.1) Base year end

12/31/2017

(7.5.2) Base year emissions (metric tons CO2e)

20043

(7.5.3) Methodological details

This is the base year of Republic's SBT GHG reduction goal. Our base year emissions are restated when we make adjustments due to methodology or boundary changes.

Scope 3: Other (upstream)

(7.5.1) Base year end

12/31/2017

(7.5.3) Methodological details

Not relevant to our operations, all of Republic’s Scope 3 emissions are in the defined categories.

Scope 3: Other (downstream)

(7.5.1) Base year end

12/31/2017

(7.5.3) Methodological details

Not relevant to our operations, all of Republic’s Scope 3 emissions are in the defined categories.

(7.8.3) Emissions calculation methodology

Select all that apply

☒ Supplier-specific method

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

100

(7.8.5) Please explain

Republic maintains detailed cost data for third-party hauler and subcontract collection services that it uses to support its collection services.

Waste generated in operations

(7.8.1) Evaluation status

Select from:

☒ Relevant, calculated

(7.8.2) Emissions in reporting year (metric tons CO2e)

107953

(7.8.3) Emissions calculation methodology

Select all that apply

☒ Waste-type-specific method

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

(7.8.5) Please explain

Republic Services has two main sources of waste generated from operations. We use a life-cycle assessment method to calculate emissions from leachate and an extrapolation methodology to aggregate company-wide emissions from other operational waste. For our MSW generated in operations, we excluded the percentage that is taken to Republic-owned or -operated landfills as that is included in our Scope 1 emissions inventory.

Business travel

(7.8.1) Evaluation status

Select from:

(7.8.2) Emissions in reporting year (metric tons CO2e)

11126.252

(7.8.3) Emissions calculation methodology

Select all that apply

☒ Supplier-specific method

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

100

(7.8.5) Please explain

Annual data for air travel, rail travel, and rental car travel is provided by Republic's travel agency. Air travel data is broken out by each flight leg and the distances, which is used to calculate total short, medium and long-haul miles (Short flights (<300 mi), Med. flights (300-2300 mi), Long flights (>2300 mi). Republic's travel agency was able to provide miles by cabin class. UK DEFRA emissions factors with radiative forcing are used to calculate the air travel GHG emissions, based on distance threshold and cabin class. Rail travel data was provided in terms of distance traveled. U.S. EPA Emission Factors were used to calculate the emissions from

the rail travel mileage. The rental car report in 2023 provided fuel volumes. U.S. EPA Emission Factors were used to calculate the emissions from the rental car fuel consumption.

Employee commuting

(7.8.1) Evaluation status

Select from:

☒ Relevant, calculated

(7.8.2) Emissions in reporting year (metric tons CO2e)

149363.216

(7.8.3) Emissions calculation methodology

Select all that apply

☒ Distance-based method

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

(7.8.5) Please explain

Republic Services calculates employee commuting based on a US EPA assumption of 41 miles round trip per eligible employee driven in a passenger car. Republic has a hybrid work from home policy for many of our employees for the duration of the year, which we accounted for in our determination of number of employees commuting each day. We used the number of annual employee commuting days to calculate total mileage. We then applied the US EPA Table 10 Emission Factor to total mileage to determine the emissions.

Upstream leased assets

(7.8.1) Evaluation status

Select from:

☒ Relevant, calculated

(7.8.2) Emissions in reporting year (metric tons CO2e)

2931.499

(7.8.3) Emissions calculation methodology

Select all that apply

☒ Supplier-specific method

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

100

(7.8.5) Please explain

Our upstream leased assets include data centers that have some predetermined agreements in place to avoid emissions. For example, our Switch data center is powered by 100% renewable energy. We apply an emissions factor of 0 for renewable energy. For non-renewable energy, we apply the applicable EPA eGrid factor based on facility location. Energy usage was provided by the data centers along with the details of their purchased renewable electricity.

Downstream transportation and distribution

(7.8.1) Evaluation status

Select from:

☒ Not relevant, explanation provided

(7.8.5) Please explain

Impacts and emissions for any downstream transportation and distribution have been incorporated as appropriate into the Waste Generated in Operations and/or Upstream Transportation & Distribution scope 3 GHG categories. We have no downstream transportation and distribution impacts.

Processing of sold products

(7.8.1) Evaluation status

Select from:

☒ Not relevant, explanation provided

(7.8.5) Please explain

We are unable to separately estimate scope 3 emissions impacts from downstream processing of commodities we recover, process and sell. We have estimated the full lifecycle emissions impacts from our sold products (mainly recycled commodities) as negative, and therefore incompatible with current, normative GHG reporting. Lifecycle avoided emissions include the displacement of upstream mining, processing and transportation of materials that enter the waste stream, transportation and recovery/processing of commodities/compost by companies like Republic, as well as, downstream processing, transportation, and re-manufacturing where applicable. We continue to evaluate and align with industry best practice reporting practices for this category.

Use of sold products

(7.8.1) Evaluation status

Select from:

☒ Relevant, calculated

(7.8.2) Emissions in reporting year (metric tons CO₂e)

9313.82

(7.8.3) Emissions calculation methodology

Select all that apply

☒ Methodology for direct use phase emissions, please specify :Total external flow of biogas from Republic landfill sites is used to quantify associated emissions for this category.

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

(7.8.5) Please explain

Use of sold products emissions are associated with the combustion of biogas that is sold to third-party's, accounting for the anthropogenic emissions only.

End of life treatment of sold products

(7.8.1) Evaluation status

Select from:

☒ Not relevant, explanation provided

(7.8.5) Please explain

As Republic does not purchase its “raw materials” used to create its products sold (i.e. recycled materials and compost) but rather receives these raw material inputs through its primary services of solid waste collection, the upstream emissions occur outside of our boundary and are not captured in our Purchased Goods and Services category. Due to the complexity of this upstream value chain, we are not able to estimate the emissions associated with any raw material inputs, however, they are incorporated to the extent possible into our “Use of sold products” lifecycle calculation above, as per the EPA WARM model.

Downstream leased assets

(7.8.1) Evaluation status

Select from:

☒ Not relevant, explanation provided

(7.8.5) Please explain

Republic has determined that this Scope 3 category is not relevant to our business. All leased assets are included in the upstream leased assets category.

Franchises

(7.8.1) Evaluation status

Select from:

☒ Not relevant, explanation provided

(7.8.5) Please explain

Not relevant to our operations, Republic does not have any franchises

Investments

(7.8.1) Evaluation status

Select from:

☒ Relevant, calculated

(7.8.2) Emissions in reporting year (metric tons CO2e)

26798.5

(7.8.3) Emissions calculation methodology

Select all that apply

☒ Investment-specific method

(7.8.4) Percentage of emissions calculated using data obtained from suppliers or value chain partners

0

(7.8.5) Please explain

Conservative estimates of Republics potential investment emissions were quantified based on our applicable investment portfolio and associated EEIO factors applied to the investee organizations. The quantification approach aligns with GHG Protocol and PCAF guidance.

Other (upstream)

(7.8.5) Please explain

Not relevant to our operations, all of Republic's Scope 3 emissions are in the defined categories.

Other (downstream)

(7.8.5) Please explain

Not relevant to our operations, all of Republic's Scope 3 emissions are in the defined categories.

(7.10.2) Are your emissions performance calculations in 7.10 and 7.10.1 based on a location-based Scope 2 emissions figure or a market-based Scope 2 emissions figure?

Select from:

☒ Market-based

(7.12) Are carbon dioxide emissions from biogenic carbon relevant to your organization?

Select from:

☒ Yes

(7.12.1) Provide the emissions from biogenic carbon relevant to your organization in metric tons CO2.

(7.12.1.1) CO2 emissions from biogenic carbon (metric tons CO2)

6901294

(7.12.1.2) Comment

There are five sources of biogenic carbon emissions that are relevant to Republic Services: CO2 from the combustion of landfill gas via flares, CO2 passing through on-site combustion devices, fugitive CO2 generated from the biological decomposition of waste in landfills, CO2 as a product of CH4 oxidation in the landfill cap, mobile combustion of biodiesel and biomethane. Biogenic emissions are treated separately from scope 1 in accordance with the GHG Protocol. Republic follows guidance from U.S. EPA on determining emissions of these sources of solid, gaseous, liquid and biomass fuels from: Mandatory Reporting of Greenhouse Gases Final Rule, 74 Fed. Reg. 56260 (Oct. 30, 2009); Tables C1 and C2 at 56409 and 56410. Republic also follows guidance from U.S. EPA on revised emission factors

for selected fuels from: Mandatory Reporting of Greenhouse Gases Final Rule, 75 Fed. Reg. 79091 (Dec. 17, 2010). Additionally, we calculate the biogenic emissions from our leachate, recycling and various fuel sources. Sequestered Carbon Landfills act as a carbon sink, permanently, biologically sequestering carbon from municipal solid waste and removing it from the carbon cycle. Since the Greenhouse Gas Protocol does not currently allow for the accounting of avoided emissions, this total is not represented in our inventory. In 2024, Republic sequestered 28.27 MMTCO2e, as calculated using a 2008 U.S. EPA waste characterization study. [Fixed row]

(7.15) Does your organization break down its Scope 1 emissions by greenhouse gas type?

Select from:
☒ Yes

(7.53.1.82) Explain target coverage and identify any exclusions

We have adopted an aggressive target for reducing our operational GHG emissions, approved by the Science Based Targets initiative (SBTi). Goal: Reduce absolute total Scope 1 and 2 greenhouse gas emissions 35% by 2030. Scope 1 emissions include emissions from landfills and fleet that are owned, leased, or operated by Republic. From the baseline year of 2017 to 2024, Republic achieved a 20% reduction in Scope 1 emissions. This results in a total Scope 1 and Scope 2 decrease of 20% since 2017. At the end of 2024, 62% of the time to complete our goal has elapsed, with 38% still remaining.

(7.53.1.83) Target objective

Emissions reduction

(7.53.1.84) Plan for achieving target, and progress made to the end of the reporting year

Please see our 2024 Sustainability Report, “Our Climate Transition Roadmap”. To reach our target of 35% GHG reductions in our Scope 1 emissions Republic is actively investing in methods to increase gas collection efficiency and innovative cover systems that will reduce the amount of fugitive methane. Republic is also investing in alternatives to landfills as demonstrated by our \$66M investment in the Republic Services Polymer Center making us the nation's first integrated plastics recycling facility. This initiative will help reduce the amount of materials in landfills and lower our Scope 1 impact. We are taking a leadership position in electric technology innovation for our fleet which is a critical step toward reducing our environmental impact through lower fleet emissions. These initiatives as well as improved building and fleet electrification and alternative fuel usage, has been impactful as shown by the 15% reduction in emissions that we have achieved from our baseline year of 2017.

9.60

(7.54.1.14) Target status in reporting year*Select from:*☒ Underway**(7.54.1.16) Is this target part of an emissions target?**

Yes. Increasing beneficial reuse of biogas collected at landfills results in lower greenhouse gas emissions at landfills. These emissions contribute to the Scope 1 landfill emissions that are part of the SBT described above. Our goal is to increase biogas collected for beneficial reuse by 50% from a baseline of 2017 in the year 2030.

(7.54.1.17) Is this target part of an overarching initiative?*Select all that apply*☒ Science Based Targets initiative**(7.54.1.18) Science Based Targets initiative official validation letter***Press Release of SBT.pdf***(7.54.1.19) Explain target coverage and identify any exclusions**

Overarching initiative: We have adopted an aggressive target for reducing our operational GHG emissions, approved by the Science Based Targets initiative (SBTi) and aligned with the UN "Climate Action" SDG 13.2 - reduce greenhouse gas emissions. Goal: Reduce absolute total Scope 1 and 2 greenhouse gas emissions 35% by 2030. Scope 1 emissions include emissions from landfills and fleet that are owned, leased, or operated by Republic. Supporting goal: Our operating strategy for managing landfill gas (LFG) emissions is to maximize LFG collected at each landfill. By safely collecting the maximum amount, we minimize any LFG escaping as

fugitive emissions, particularly high GWP methane. The collected LFG is either beneficially reused as renewable energy or thermally oxidized to CO2 in a flare. We have a distinct goal to increase biogas sent to beneficial reuse by 50% by 2030 (from a 2017 baseline), by growing our capacity of regenerative landfills. By diverting biogas to beneficial reuse, we avoid extraction and use of fossil fuels, displacing the need for environmentally damaging activities like fracking and oil sands prospecting. For the 7.54.1 calculation, we report % share in target year as 100%, indicating that we have fully achieved our 2030 renewable energy goal, described in this paragraph. Our % share in the reporting year represents a springboard as we prepare facilities for the transition to RNG, the most common application of LFG to energy under development. For additional information about our biogas goal (reported in standard cubic feet) please refer to our Sustainability Report at RepublicServices.com/Sustainability/Reporting.

(7.54.1.20) Target objective

We use this target to work towards our Science-Based Target.

(7.54.1.21) Plan for achieving target, and progress made to the end of the reporting year

As of the date of publication, Republic Services is involved in many landfill gas-to-energy projects, with additional RNG projects in our development pipeline. This represents the country's largest RNG portfolio build-out to date, and will convert landfill gas into pipeline-quality RNG that can be used for a variety of applications to displace gas from fossil fuels. The initiative is expected to generate substantial progress towards Republic's long-term sustainability goal to beneficially reuse 50% more biogas by 2030

Select from:

☒ <1 year

(7.55.2.8) Estimated lifetime of the initiative

Select from:

☒ 16-20 years

(7.55.2.9) Comment

Annual monetary savings is revenue generated from recycling and organics facilities in 2024. Investment varies by year, amount shown reflects 2024 capital investment. Emission reductions are calculated using the EPA WARM v16 model to determine the alternative disposal methods impact on material breakdown. We reviewed both diversion of recycled and organic material for this assessment.
[Add row]

(7.55.3) What methods do you use to drive investment in emissions reduction activities?

Row 1

(7.55.3.1) Method

Select from:

☒ Compliance with regulatory requirements/standards

(7.55.3.2) Comment

Our facilities and operations are subject to a variety of federal, state and local requirements that regulate, among other things, the environment, public health, safety, zoning and land use. In order to comply with regulations such as EPA landfill gas collection standards, California SB 1383 and organics diversion mandates, and the California low carbon fuel standard we have invested in infrastructure to meet or exceed the regulatory standards. These laws and regulations provide governmental authorities with strict powers of enforcement, which include the ability to revoke or decline to renew any of our operating permits, obtain injunctions, or impose fines or penalties in the event of violations, including criminal penalties.

Row 2

(7.55.3.1) Method

Select from:

☒ Financial optimization calculations

(7.55.3.2) Comment

In some cases, we exceed regulatory requirements/standards and/or undertake projects to drive environmental improvements that are not contemplated by regulatory agencies. Investments in these projects are driven by a positive return on investment that often includes other factors, such as impact on our brand or license to operate.

[Add row]

(7.73) Are you providing product level data for your organization's goods or services?

☒ Climate Bonds Taxonomy

(7.74.1.3) Type of product(s) or service(s)

Road

☒ Compressed biogas engines

(7.74.1.4) Description of product(s) or service(s)

Republic has been investing in compressed natural gas (CNG) collection vehicles for over 15 years. In 2024, about 20% of our fleet fuel consumption was natural gas, which is 100% sourced by RNG. We estimate RNG to produce 70% fewer emissions than diesel, the lowest carbon intensity of any commercially available fuel today, according to the California Air Resources Board (CARB). Today, our use of RNG is a bridge fuel towards scaling of our electric vehicles. Use of these trucks to provide collection services to our customers can be classified as a low-carbon service offering because their use results in lower emissions for Republic as we deliver our service.

(7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)

Select from:

☒ Yes

(7.74.1.6) Methodology used to calculate avoided emissions

Select from:

☒ Use stage

(7.74.1.11) Estimated avoided emissions (metric tons CO₂e per functional unit) compared to reference product/service or baseline scenario

277096

(7.74.1.12) Explain your calculation of avoided emissions, including any assumptions

*To calculate avoided emissions, the actual amount of biomethane (RNG) fuel was converted to Diesel Gallon Equivalent (DGE). The DGE of fuel was then calculated to metric tons of CO₂e using the EPA emissions factor for diesel. The second step is to take the actual emissions from the RNG fuel and subtracting that value from the calculated diesel value. (RNG DGE * Diesel Emission Factor) - (RNG DGE * RNG Emission Factor) = Avoided Emissions from RNG use*

(7.74.1.13) Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year

Row 2

(7.74.1.1) Level of aggregation

Select from:

☒ Group of products or services

(7.74.1.2) Taxonomy used to classify product(s) or service(s) as low-carbon

Select from:

☒ Climate Bonds Taxonomy

(7.74.1.3) Type of product(s) or service(s)

Other

☒ Other, please specify :Landfill Diversion

(7.74.1.4) Description of product(s) or service(s)

Republic offers a number of products and services today that enable our customers to avoid emissions. These products include landfill gas for renewable energy; recycling of residential and commercial commodities, food waste and green waste; universal recycling (batteries, light bulbs, etc.); and electronic recycling (mobile devices, televisions, etc.).

(7.74.1.5) Have you estimated the avoided emissions of this low-carbon product(s) or service(s)

Select from:

☒ Yes

(7.74.1.6) Methodology used to calculate avoided emissions

Select from:

☒ Estimating and Reporting the Comparative Emissions Impacts of Products (WRI)

(7.74.1.7) Life cycle stage(s) covered for the low-carbon product(s) or services(s)

Select from:

☒ End-of-life stage

(7.74.1.8) Functional unit used

Short Tons

(7.74.1.9) Reference product/service or baseline scenario used

Short tons of material landfilled.

(7.74.1.10) Life cycle stage(s) covered for the reference product/service or baseline scenario

Select from:

☒ End-of-life stage

(7.74.1.11) Estimated avoided emissions (metric tons CO2e per functional unit) compared to reference product/service or baseline scenario

13574971

(7.74.1.12) Explain your calculation of avoided emissions, including any assumptions

*Using the EPA WARM model we input the short tons of material that was recycled and composted and entered those tons as tons landfilled. The EPA WARM model provides emissions rates for mixed recyclables and mixed organics which were utilized as the alternative disposal scenario. The difference between landfilled short tons and recycled and composted short tons is the emissions avoided number. $((\text{Short tons recycled} + \text{Short tons organics}) * \text{EPA landfill emission factor}) - (\text{Short tons recycled} * \text{EPA mixed recycled factor}) + (\text{Short tons organics} * \text{EPA mixed organics factor})$.*

(7.74.1.13) Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year

10

[Add row]

(7.79) Has your organization retired any project-based carbon credits within the reporting year?

Select from:

☒ No

C13. Further information & sign off

(13.1) Indicate if any environmental information included in your CDP response (not already reported in 7.9.1/2/3, 8.9.1/2/3/4, and 9.3.2) is verified and/or assured by a third party?

	Other environmental information included in your CDP response is verified and/or assured by a third party
	Select from: <input checked="" type="checkbox"/> Yes

[Fixed row]

(13.1.1) Which data points within your CDP response are verified and/or assured by a third party, and which standards were used?

Row 1

(13.1.1.1) Environmental issue for which data has been verified and/or assured

Select all that apply

☒ Climate change

(13.1.1.2) Disclosure module and data verified and/or assured

Environmental performance – Climate change

☒ Progress against targets

(13.1.1.3) Verification/assurance standard

Climate change-related standards

☒ ISO 14064-3

(13.1.1.4) Further details of the third-party verification/assurance process

We have chosen to verify this additional data point as it is related to the annual verification of our organization-wide biogas collection goal. This goal is described in 7.54 and has direct impacts on emissions from landfill activities.

(13.1.1.5) Attach verification/assurance evidence/report (optional)

FY24 Assurance Statement.pdf

Row 2

(13.1.1.1) Environmental issue for which data has been verified and/or assured

Select all that apply

☒ Climate change

(13.1.1.2) Disclosure module and data verified and/or assured

Environmental performance – Climate change

☒ Waste data

(13.1.1.3) Verification/assurance standard

Climate change-related standards

☒ ISO 14064-3

(13.1.1.4) Further details of the third-party verification/assurance process

We have chosen to verify our facility recycling tonnage as it is core to our industry and impacts our emissions inventory. Diversion tonnage metrics are reported in question 7.52 and emissions in Scope 3, Category 5.

(13.1.1.5) Attach verification/assurance evidence/report (optional)

FY24 Assurance Statement.pdf

[Add row]

(13.3) Provide the following information for the person that has signed off (approved) your CDP response.

(13.3.1) Job title

Executive Vice President - Chief Financial Officer

(13.3.2) Corresponding job category

Select from:

☒ Chief Financial Officer (CFO)

[Fixed row]
